

Is the death clock really able to accurately predict human lifespan?

A free website called Death Clock uses AI to predict a user's lifespan based on their daily habits.

If you want to know your estimated life expectancy, you can visit a free website called Death Clock, which uses artificial intelligence (AI). Death Clock uses AI to analyze age, weight, and general outlook on life to make 'accurate' predictions about a person's likely time of death. Photo: Shutterstock/alexkich.

Test taken: Monday, 10th February 2025.
At time of testing you are 29 years, 1 months and 30 days old.
 Current age in: Days: (10,654), Weeks: (1,522), Months: (355)

Based on our calculations you will die on: **Monday, 14th January 2064**

[Share on facebook](#) [Post](#)

You will live to be 68 years, 1 months and 3 days old!

That's **14216 Days, 23 Hours, 32 Minutes, 48 Seconds** remaining...
 Or approx: **39 years**

Avg life expectancy of other Female testers from US with your BMI: **78.2 years** old

Cardiovascular disease

After filling in all the information, users can be provided with predictions about their cause of death, how their life expectancy compares to others of the same sex and their body mass index (BMI). Photo: Mail Online.

Death Clock predicts the user's lifespan and provides a countdown of the days, hours, minutes and seconds they will live until the "grim reaper" comes. Photo: businesstoday.

However, the Death Clock website does not take into account family history, health conditions or mental health, which can affect a person's life expectancy. Photo: urfinguss/Getty Stock Image.

In addition, the Death Clock website gives users some advice to live longer, such as exercising regularly for at least 30 minutes a day to reduce the risk of health problems such as heart disease, diabetes and cancer. Photo: linkedin.

Death Clock also advises people to stay away from tobacco - the leading cause of lung cancer - and limit alcohol consumption. Photo: Jagran/thetatva.
