

It is recommended that iPhones, even if they are cheap, should not be bought at this time

No matter how attractive the price of these iPhone models are, you should not buy them now.

These types of iPhones should not be bought at this time

iPhone is one of the products with very high stability and is often chosen by many people for long-term use. However, there are devices that are too outdated and not suitable for use at the present time.

iPhone 8 and 8 Plus and earlier

Although the iPhone 8 and 8 Plus used to be Apple's high-end products, the duo was launched 6 years ago. The very cheap price of the current product line does not help keep the product off the list of not to buy at this time.

First, in terms of configuration, iPhone 8 and 8 Plus are outdated compared to the latest products on the market. They do not support 5G technology, and their processors are no longer powerful enough to handle mobile applications and games smoothly.

Besides, these products can no longer update to the latest iOS 17. For those who need a new software experience, iPhone 8 and iPhone 8 Plus are clearly not the right choice.

iPhone

iPhone X is the first iPhone model to use a high-end OLED screen. However, compared to the latest iPhone versions, the iPhone X has become quite old and may not meet the needs of some people.

The weakness of the iPhone X is that it is no longer powerful enough, the battery life is unstable and may not be enough to meet a day's usage needs. The product is no longer upgraded to the new iOS 17.

iPhone SE (3rd generation)

This is the successor product of iPhone SE (2nd generation). The product is equipped with the A15 Bionic chip and you can buy the iPhone SE (3rd generation) with 64GB capacity for \$429.

Despite being Apple's most affordable iPhone, the iPhone SE (3rd generation) is not worth owning. Compared to current products, the design of the iPhone SE 2022 is too "outdated". All Android brands, including Apple, have eliminated the design style with super thick top and bottom bezels.

Apple A15 Bionic is probably the most valuable thing on the iPhone SE 2022 version. However, with a small screen phone model and low battery capacity like the iPhone SE, this bright spot is probably not enough.

iPhone 12 mini and iPhone 13 mini

Although the iPhone 12 and 13 mini have outstanding advantages in size and design for those who love compact phones, there are also some limitations that consumers need to consider before deciding to buy the phone. This.

If you often use your phone to watch videos or play games, the small screen size may reduce the usage experience. iPhone 12 and 13 mini have smaller batteries than other iPhone versions, so battery life is also reduced. Instead, you can choose larger screen iPhones like iPhone 11 or iPhone 12 because the current prices of these products are extremely good.

Some things to note before buying a used iPhone

Actual condition of the product

To get detailed information about the condition of an iPhone, you need to consider many different factors such as its launch time, features, usage level and current status of the product.

When buying a used product, there are many different conditions such as the product being 99% new, 95% new, or possibly damaged. To evaluate the condition of the product, you should carefully review the information provided by the seller or sales website. At the same time, you should also ask the seller to provide videos or images of the product or come directly to the store to check for details before deciding to buy.

Number of years released

The age of the old iPhone also has an impact on the performance and longevity of the product. If you are interested in buying a used iPhone, choose products whose launch time is as close to the present as possible. Because these products will usually have better performance and be supported by Apple for a longer period of time.

Update support

You should consider whether the old iPhone versions you are planning to buy are still receiving the latest operating system updates from Apple or not. Apple often provides patches, new features, and performance

improvements through operating system updates. Make sure your old iPhone is capable of receiving these new updates to ensure the best safety, features, and performance of the device.

Price

The main purpose of buying a used iPhone is to save money. Therefore, you need to carefully consider the price of the old iPhone and make sure that it is suitable for the current condition of the device and how much the price difference is compared to the new product.

If the price of an old iPhone is close to the price of a new iPhone, you should consider adding some money to buy a new phone to ensure better product quality. However, if the price of an old iPhone is too cheap, you need to be wary because it may be a sign of a poor quality product.
