

It's unbelievable: She turned the electric car into the world's largest computer mouse, hovering over where she drove herself.

Simone Giertz, a scientist and crazy creator recently, has surprised many people to turn the electric car into the largest computer mouse in the world.

Simone Giertz, a scientist and crazy creator recently, has surprised many people to turn the electric car into the largest computer mouse in the world.

After accidentally buying the yellow Sebring-Vanguard Citicar electric car, produced in the 1980s, with a very unique wedge-shaped, triangular prism design, Giertz made a bold decision to turn The car became the true computer optical mouse, where the mouse was, the car ran there.

To click, you just need to squeeze the horn.

Below is the process of studying and transforming Citicar into Giertz's computer mouse with the help of partner William Osman.

This is a creative 1-0-2 but not a high practical application. Giertz and Osman said they plan to use this unique car to send emails.
