

JavaScript code to create Pareto charts & graphs

The example below illustrates a Pareto chart template created with JavaScript. You will also have the source code to edit in the browser or save to your computer to run locally.

Pareto Chart or Pareto chart is a combination of column & line graph. The columns are placed in descending order, and the line graph represents the cumulative total.

This type of chart/graph is used to highlight most important situations. It is also interactive, responsive and supports animation & photo export.

The example below illustrates a **Pareto chart template created with JavaScript** . You will also have the source code to edit in the browser or save to your computer to run locally.

Source : CanvasJS

Tweak the chart

You can change `color` the column or line to highlight it. Some other popular editing options include `dataPointWidth`- data point width, `markerType`- marker style, `markerColor`- marker color, etc.
