

# JSPaint, an online tool to help you use Microsoft Paint wherever you are

JSPaint, a free website that provides users with almost the complete Paint tool on the Internet.

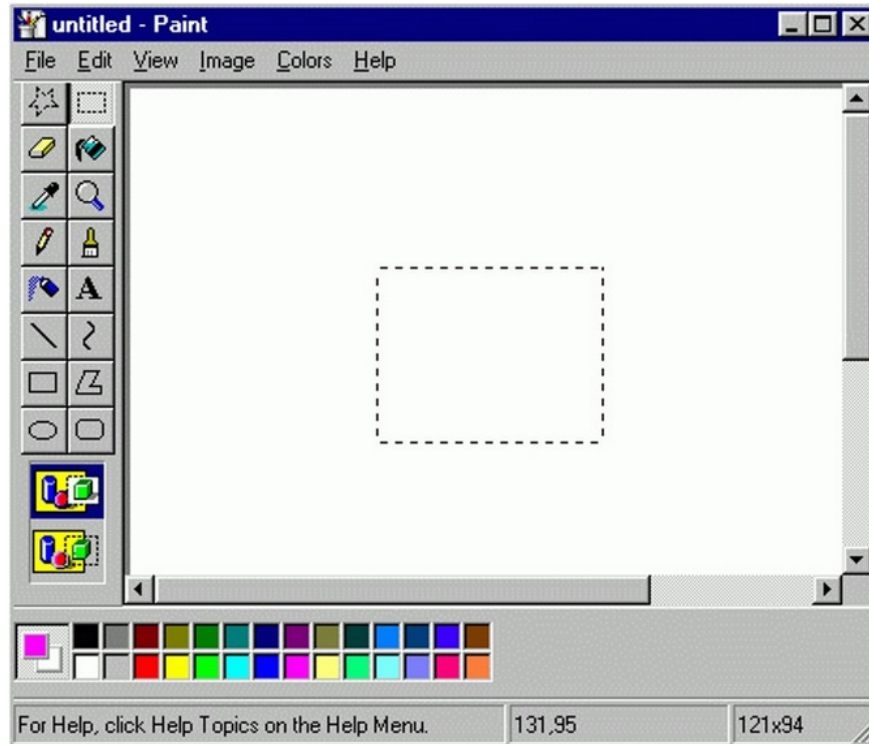

After 32 years of existence, Microsoft has announced that Paint is no longer built into Windows. But Windows 10 users and older versions will still have a more convenient online option.

It's JSPaint, a free website that provides users with almost the complete Paint tool on the Internet. This exciting online photo editing tool can work on almost all popular browsers, including Microsoft Edge, which you can use anytime, anywhere. You can access [jspaint.ml](http://jspaint.ml) to experience this online Paint tool.

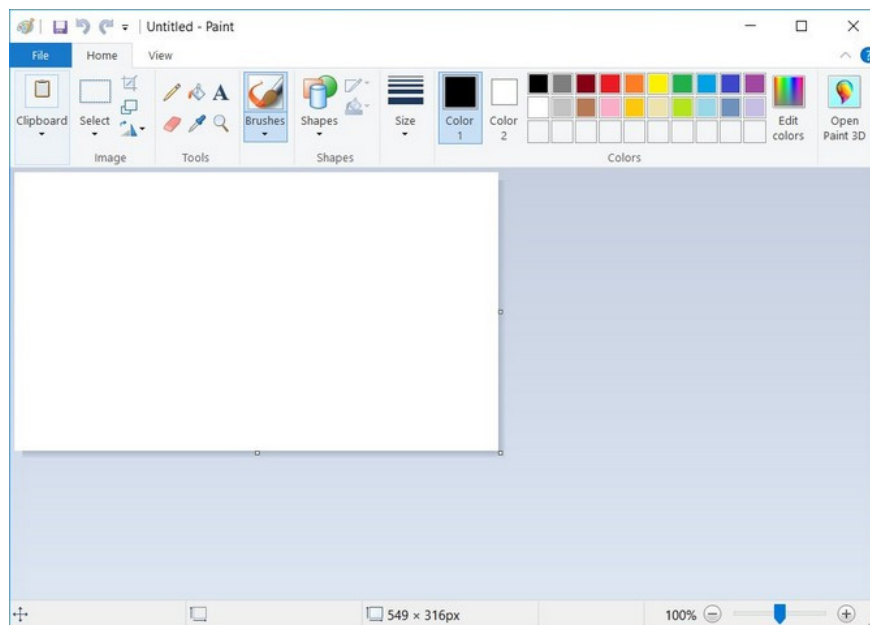

JSPaint has a fairly simple interface compared to the current versions of Paint on Windows 8 and Windows 10.

Interface of JSPaint.

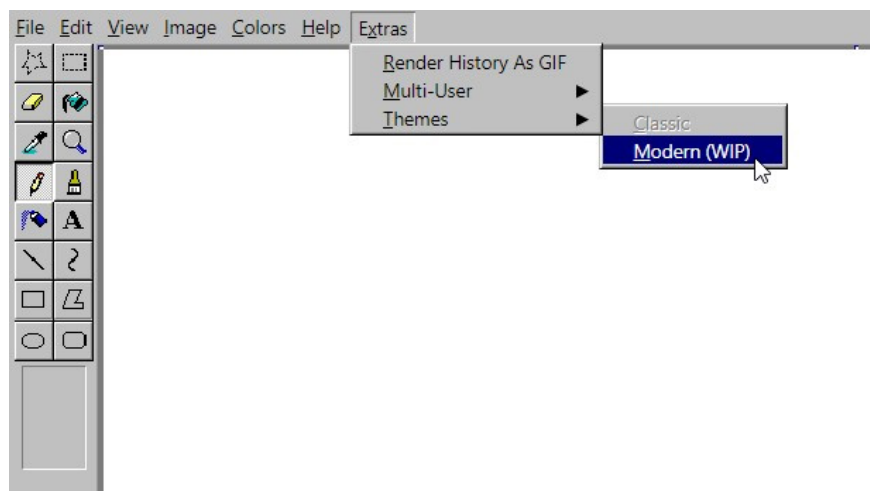

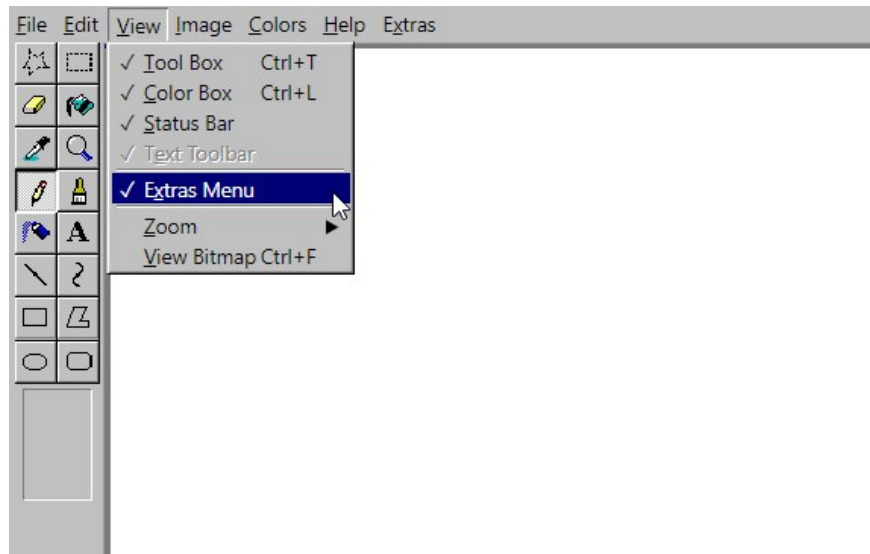

The old Windows Paint interface on Windows XP series.

Windows Paint with a modern interface on Windows 7, 8 and Windows 10 today.

On JSPaint's interface, above are still popular toolbars like File, Edit, View, Image, Colors. On the left are the drawing toolbars and color palettes. The design is quite similar to the look of the early Paint version.

But if you want to renew, users can switch to the modern interface by selecting **View** -> **ticking Add Menu** -> a new Extras menu will appear on the top toolbar -> click **Extras** -> select **Themes** -> choose **Modern** (WIP).

The highlight of JSPaint is that it supports undo or unlimited redo operations, while Paint limits 3 times. In addition, this online tool also supports auto-saving, non-background image editing, SVG and GIF formats, and of course it works even on mobile.
