

# Jurassic dinosaur eggs from Jurassic era were discovered in China

The latest finding shows that while digging a new school's foundation, construction workers found a perfectly preserved dinosaur nest.

**The Jurassic period was a period when scientists and historians were obsessed with impressive historical events.**

There has been a fact that dinosaurs existed millions of years ago. Many fossils have been found in recent years, making this view more persuasive.

The latest finding shows that while digging a new school's foundation, construction workers found a perfectly preserved dinosaur nest.

About 30 dinosaur eggs have been found in Guangzhou City in Jiangxi Province, an area dubbed the "home of dinosaurs" in China - and experts believe the egg has been 130 million years old. year old.

According to an article published in Nature.com, the city and the surrounding area is "one of the most ovoidptorosaurian dinosaurs in the world" with seven oviraptorosaurian dinosaurs (feathers and bird breeds). named after the area.

The construction workers created an explosion to break the large rock and fossil dinosaur eggs discovered, fortunately they were not broken.

When the workers began collecting the fragments of the rock, they discovered an egg nest with some black shells - up to 2mm thick - lying between them.

While builders suspect objects are dinosaur eggs, they are not really sure so they contacted the local police station.

According to [Mirror.co.uk](https://www.mirror.co.uk), archaeologists rush to the area. Staff identified eggs about 130 million years old, placed them in the Cretaceous period, appearing immediately after the Jurassic period.

The Cretaceous period began 145 million years ago and ended 66 million years ago. It has flourished in the Paleogene period.

Live dinosaurs during the Cretaceous period include Tyrannosaurus rex (T-rex), velociraptor with feathers and three-horned triceratops.
