

Just released iOS 12 has been successfully hacked by Chinese hackers on the iPhone Xs

iOS 12 was officially released not long ago by Apple but was successfully unlocked by the famous Chinese hacker group Pangu on the newly launched iPhone Xs. This must be an unhappy news for Apple.

iOS 12 was officially released not long ago by Apple but was successfully unlocked by the famous Chinese hacker group Pangu on the newly launched iPhone Xs. This must be an unhappy news for Apple.

iOS unlocking, breaking the limits that Apple has installed on all iPhones allows users to do almost anything to customize the experience with third-party software that has 'unacceptable' permissions. .

Security researcher Min (Spark) Zheng shared on Twitter the results of one of the Pangu group members, two screenshots showing the process of successful unlocking on the iPhone that Apple just released, iPhone Xs uses Bionic A12 chips.

At the same time, the expert also revealed that the Pangu team successfully unlocked iOS 12 by passing a PAC function (code to authenticate points) integrated on the Bionic A12 chip. In addition, unlocking is possible on max iPhone Xs because it has hardware very similar to iPhone Xs.

The unlocking of iOS will help users have more experience but this action is a violation of Apple's end-user agreement terms and push users to face the risk of equipment loss of protection before security flaws, stolen data . In addition, unlocked iPhones will also not have any genuine warranty or any support from Apple.
