

Kaspersky Internet Security 2011 Beta causes the computer to hang

Users drill quickly to install the first test version of Kaspersky Internet Security 2011 (number 11.0.0.87) because it may cause the computer to hang.

Users drill quickly to install the first test version of Kaspersky Internet Security 2011 (number 11.0.0.87) because it may cause the computer to hang.

Kaspersky Lab has just released the first beta version of Kaspersky Antivirus 2011 Beta and Kaspersky Internet Security 2011 Beta with some notable improvements, the most notable of which is the feature of switching desktop from normal to desktop environment. **Safe - Safe Desktop** (right-click the Kaspersky Internet Security 2011 icon on the tray and select **Safe Run for Applications**) so that users can experiment with software or run executable files without fear of photos enjoy the system.

Kaspersky Internet Security 2011 beta test interface

However, according to the writer's test, Kaspersky Internet Security 2011 Beta works unstable, affecting the speed of booting and processing other programs, taking up memory resources both in the background and when running. Scan the machine (sometimes up to 500MB), even causing the computer to hang.

When testing on a Windows Vista computer with a 2.2GHz Core 2 Duo CPU and 2GB of RAM, **Kaspersky Internet Security 2011 Beta caused the computer to hang during malware scans** on the hard drive when users used Office more. 2007 when KIS was active; Worse, make a Windows XP virtual machine with a 2.2GHz Core 2 Duo CPU and 512MB RAM hangs right at the last step of the installation process.

Not only that, due to the integration of Kaspersky AntiVirus 2011 Beta and Kaspersky Internet Security 2011 Beta for testing purposes, the installation file is quite large (100MB), download [here](#). Time to complete Kaspersky Internet Security 2011 Beta installation on the above computer (requires removal of antivirus program, pre-installed Internet Security) is also quite long, takes more than 10 minutes.

Many innovations in interface and features, but unfortunately, the Beta of Kaspersky Internet Security 2011 left the computer suspended. Therefore, you should wait for Kaspersky Lab to release the update (bug fix) of Kaspersky Internet Security 2011 Beta and then install the test on your computer.
