

Kerio MailServer - Protect email against all network threats

In response to growing security threats, Kerio MailServer offers a variety of features to protect email from computer virus infections and infections or to send spam emails.

Kerio MailServer represents a new generation of email servers designed for corporate networks. To cope with increasing security threats, Kerio MailServer offers a variety of features to protect email from blocking and infection by computer viruses or sending spam emails. Kerio MailServer is a modern secure email server that allows companies to collaborate with each other via email, contacts, schedules and shared tasks.

For small and medium businesses, schools, government agencies and non-profit organizations that need the features and tools needed to exchange information, Kerio Mailserver is a reasonable choice. The product is easy to install, admin and lower cost than using Microsoft Exchange.

Mail security : Kerio MailServer is a fast and secure multi-domain mail server that works with all POP3 and IMAP client mail on Windows, Linux and Mac.

Mobile Email : Kerio MailServer incorporates access to email, calendar and contact information by wireless synchronization with smartphones. Support for mobile platforms including Treo with Palm OS, Windows Mobile®, Symbian and BlackBerry .

Virus protection : The unique in-house antivirus program is part of both versions: Kerio MailServer is integrated with McAfee Antivirus and Kerio MailServer supports other antivirus software from companies (such as Avast, AVG, eTrust, NOD32, Sophos, Symantec and Clam AV) help protect more.

Anti-spam function : Kerio MailServer is integrated with SpamAssassin software based on content and spam-based anti-spam tools, so Kerio MailServer greatly reduces the amount of spam. Kerio Mail Server provides functions to detect and isolate comprehensive spam. A variety of advanced and powerful anti-spam tools such as Caller ID, protection from directory attacks and bandwidth limits help companies significantly reduce the security and legal risks associated with spam.

Email, calendar and collaboration : To replace Microsoft Exchange, Kerio MailServer provides access to shared calendars, contacts and tasks from Microsoft Outlook, Microsoft Entourage, and Kerio WebMail, meanwhile, reduces the Total Cost of Ownership (TCO) and provides a better user experience for small and medium-sized enterprises (SMEs).

Kerio WebMail & Kerio WebMail Mini : Two different web-based email clients, one shaped like Microsoft Outlook and the other optimized to view email on PDA devices, giving users both a sense of comfort roof and speed while while still able to work on most modern web browsers, like Safari and Firefox.

Easy to admin : Administrators can download installation and configuration in minutes. Simple visual instructions help most of the most common administration tasks. The administration console allows secure remote access and provides bookmarks for multiple servers.

Conversion tool for Microsoft Exchange : To help companies convert from Microsoft Exchange 5.5 / 2000/2003 to Kerio MailServer, Kerio provides Kerio Exchange Migration Tool. It converts accounts, folder structures, emails, all attachments, calendars, contacts and tasks.

Directory service : Managing user accounts in Kerio MailServer can use the resident database or outpatient directory services. Kerio MailServer integrates with Active Directory on Windows and Apple Open Directory on Mac OS X Server.

Scalability : Kerio MailServer can expand messaging servers to support 20 users anywhere, in small local networks, up to thousands of users operating with just one server. A server easily supports 500 users of IMAP at the same time with anti-spam and anti-virus filters without affecting its performance.

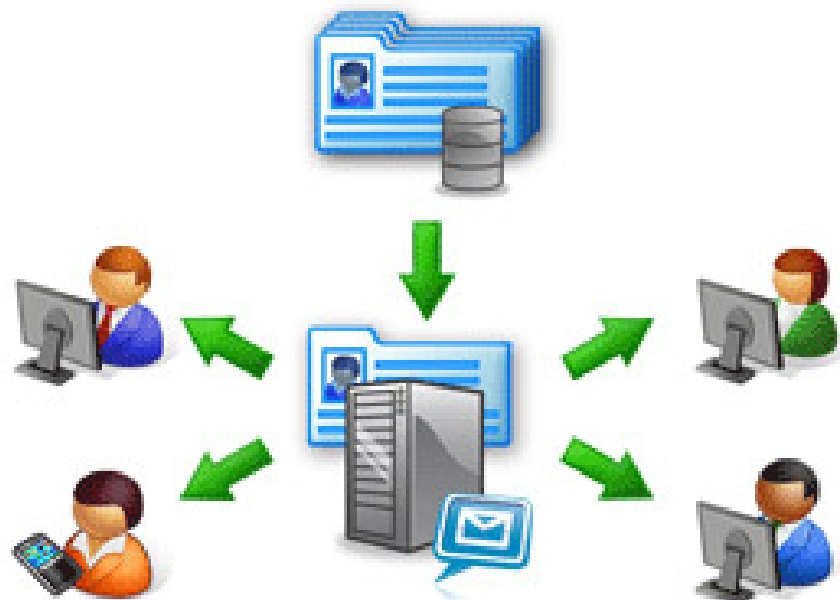

Supported operating systems

Kerio MailServer runs on Windows 2000 / XP / 2003 / Vista, server versions and no servers, Red Hat Linux, openSUSE and Mac OS X. Kerio Outlook Connector for Microsoft Outlook runs on Windows 2000 / XP / 2003 / Vista. Kerio MailServer also comes with a virtual application Fedora Core 6.

Kerio MailServer 6.7

Latest version of Kerio MailServer with new features like:

Global address list

Synchronize with Active Directory or Apple Open Directory

- Add new accounts and automatically remove deleted accounts
- View global offline contacts using Outlook, Entourage and Apple Address Book

The Conversion Tool

Kerio provides Kerio IMAP Migration Tool (KIMT) to help customers transfer IMAP email servers to Kerio MailServer (Kerio email server). It is possible to install this converter on Windows, Linux or Mac computers and with just a few clicks, this tool will pull data from any IMAP compliant server and move them to Kerio MailServer.

Moving content includes :

- Domain names
- User accounts
- Email
- Folders

Run on Mac, Windows and Linux

Experience better from Mac

- *Microsoft Entourage* - The automatic configuration tool for Microsoft Entourage 2004/2008 (included in the integration page of Kerio WebMail) allows users to configure their account with the correct settings.
- *CalDAV* - Kerio MailServer will hide details of individual events when you share your calendar with others using CalDAV tools
- *Address Book* - Groups in Apple's address book are being synchronized with Kerio WebMail, where you will see them as categories.

New improvements on Linux

Kerio MailServer is now also installed on

- Ubuntu Linux 8.04 LTS
- Debian 5.0

Better anti-spam performance

Over 14 anti-spam classes

- DHA (Anti-attack protection on contacts)
- SpamAssassin (Bayes, heuristic, and SURBL)
- Anti-phishing / anti-phishing
- RBL (servers blacklisted in real time)
- Optional whitelists (whitelists and blacklists (blacklisted)).
- SMTP limits and more .

Reduce consumption of server resources

Prevent up to 80% of spam even before it can reach the server. Save hard drive space, RAM and CPU usage.

Virus protection

Start McAfee software with built-in antivirus protection

- Deploy faster
- Better compatibility
- Less maintenance

3rd party antivirus anti-virus program

Use your existing antivirus system with Kerio MailServer easily through Kerio's built-in antivirus embedding program.

Ready with dual anti-virus technology

McAfee combined with a second antivirus engine gives you dual antivirus protection.

- Optimized for multi-processor server system
- A faster new system for parallel processing of email messages
- SpamAssassin is new, updated with greater accuracy

64-bit Microsoft Active Directory

- Kerio Active Directory Extension can now run on 64-bit versions of Microsoft Windows Server

Support RoadSync 4.0

- Synchronize tasks
- Browse HTML messages
