## What is IPL hair removal technology?

IPL hair removal has the full name of the Intense Pulsed Light temporarily understood as "intense pulsed light hair removal". This is a new generation hair removal technology that can overcome the disadvantages of traditional hair removal methods to bring about 90% efficiency.

IPL is considered an effective and safe hair removal technology, which is widely used by medical clinicians and cosmetologists today.

IPL will go deep into the skin to position the hair follicles. There, the hairs are heated up to 70 degrees Celsius in milliseconds to destroy hairs and germs of hairs. E-Light light will go deep and lie in the skin for about 3 weeks to eliminate the nutrients to each hair, make the hair weaken and shed slowly naturally, as well as prevent hair from growing back. A special feature is that they do not hurt the skin.

## **Evaluate advantages and disadvantages of IPL hair removal technology**

### **Advantages of IPL hair removal**

1. High safety: On each IPL hair removal machine, equipped with automatic cooling system helps users to avoid the maximum pain, redness or injury during hair removal.
2. IPL has the ability to thoroughly handle the condition of dark skin, inflammation of hair follicles, help skin smooth and shiny, no longer sweat causing unpleasant odors.
3. Thanks to the strong beams of light, brown spots and spots on the skin disappear, it does not harm the structure of organs around the hair follicles. This supports pores that are no longer particularly large in the armpit area.
4. This hair removal technology has a radical effect on the root of hair follicles that bring long-lasting effects, if persistent performance can help permanently remove hairs successfully.
5. Almost this method does not cause side effects for users
6. This method can be applied to many different sites, applied in many areas of the body skin.

### **Disadvantages of IPL hair removal**

Besides the advantages, this hair removal method also has some disadvantages such as:

1. Not much effect with fluff
2. Some sensitive skin areas such as face, chest . still have a slight pain but they will disappear immediately
3. Do not bring immediate results that need perseverance follow the course of 15-20 times, each time about 45-90 minutes
4. Not suitable for dark skin

## **Notes when using IPL hair removal method**

Here are the important notes if you want to apply IPL technology to "destroy" the obnoxious hairs on your body:

1. Do not remove hair at sun-exposed areas, brown skin areas by spacecraft or tanning cream.
2. Currently, no research has shown that IPL light is harmful to the fetus. However, due to the pregnancy process, the woman's body always changes hormones which will affect the growth cycle of hair and hair. Therefore, pregnant women should not apply this hair removal method.
3. For people with menstrual androgenic dysfunction, there is often a tendency to develop secondary hirsutism, and it is necessary to measure blood hormones and consult with experts about the use of IPL. There are cases that will have to combine IPL technology and new medical treatment to work.
4. For those women who have implemented ways to remove mechanical hairs such as: Wax hair, epilation by tweezers, shaving with razor blades, electrolysis or using forms to remove hair . should not apply hair removal IPL in about 3 weeks after implementation.
5. Women who use Tretinoin (Retin A, Renova) ingredients should not apply IPL hair removal technology if they want to stop applying them for at least 2 weeks.
6. Do not combine hair wax, tweezers . use topical creams or exfoliate skin in areas where IPL is being treated
7. This method also does not apply to people with open wounds
8. It is necessary to be effective against 2-3 weeks before treatment, because IPL hair removal method will be more effective in areas with less pigmentation, or sunburn.

## **Suggest some of the best selling IPL hair removal machines today**

### **Personal IPL hair removal machine RIO IPHH**
