

Komodo assassin dragon slayed a giant buffalo buffalo with a cup

With the body of a crocodile about 3m long, weighing nearly 100kg, along with the deadly secret weapon of venom gland hidden deep in the sharpened lower jaw, the Komodo dragon was dubbed the assassin dragon who could kill her son. Big bait with just one bite to cause blood leakage.

Komodo dragon is the largest lizard in the world today, we cannot find this animal anywhere on earth other than the islands in Indonesia. This giant lizard species is believed to have a close relationship with the dreaded dinosaurs millions of years ago.

Possessing the body of a crocodile about 3m long, weighing nearly 100kg, along with the deadly secret weapon of venom gland hidden deep in the sharpened lower jaw, the Komodo dragon was dubbed the "killer dragon" that could be Drew the big prey with just one bite to cause blood to leak. Therefore, Komodo dragons became "nightmares" of wild buffalo as well as many other ungulates.

Komodo dragon when hungry becomes very aggressive, out of control. If they have not found prey they can eat their own flesh.

Giant wild buffalo is one of Komodo dragon's favorite dishes. To get this lucrative meal, they just need to approach, approach the foot of the buffalo and make a bite to cause blood leakage.

A small wound does not seem serious, but it is enough to kill the victim. When bitten, the prey runs away but it will gradually become paralyzed. The poison will affect the prey causing shock, abdominal pain, lowering blood pressure, lowering body temperature, increasing blood circulation, causing nerve paralysis, causing blood to freeze so that they quickly die from blood loss. . Therefore, after performing the bite, the Komodo dragon casually looked at the prey fleeing, because they knew the venom would do the rest.

Owing to the thick skin, Komodo dragons become "inviolable" against poisonous snakes like cobra. With sharp teeth, the dragon bit the body, biting the snake to the ground to death before eating it.
