

Laptop 8-hour Aspire Timeline battery launches in Vietnam

The device was developed based on the idea: instead of equipping heavier, heavier batteries, the manufacturer enhanced its robust configuration and the lowest possible energy consumption.

The device was developed based on the idea: instead of equipping heavier, heavier batteries, the manufacturer enhanced its robust configuration and the lowest possible energy consumption .

Applying a series of new technologies, Aspire Timeline has a Smart Power button, which is considered a key to help users extend the time to use simply and easily. Just press the button, the machine will switch to special mode, automatically customize many complicated functions to save energy effectively. Very low voltage combined with Intel Display Power Saving Technology 4.5 technology helps reduce screen power while the display is still bright, limiting 33% of power consumption compared to conventional computers. As a result, machine performance is enhanced and battery life is increased to 40%.

Aspire Timeline has Energy Star 5.0 standard, which means the machine also saves energy even when using direct power. The machine's adapter also consumes 66% less energy than the Energy Star 5.0 standard mentioned above. Specifically, the Aspire Timeline will save 1,752W per year, equivalent to the energy of lighting a 15W bulb continuously for 116 days. This special adapter is designed to automatically switch to standby mode when the battery is fully charged, minimizing power consumption while extending battery life.

The Aspire Timeline's design is quite impressive with the thinnest point less than 24 mm, the distance between

the thinnest and thickest point is 5 mm. Thanks to an aluminum alloy case, the Aspire Timeline models are very light, ranging from 1.6 kg to 2.4 kg.

Aspire Timeline uses special cooling technology called Laminar Wall Jet, which is used in aircraft engine radiator technology. The air flow will dissipate through the radiator in the bottom, help reduce 60C and make the surface very cool.

It has 3 versions of 13.3 ', 14' and 15.6 ', and is sold at Acer dealers nationwide with the price of 14,599,000 VND, 16,599,000 VND and 16,299,000 VND respectively.
