

# Laptop automatically stops charging when playing games - Fast processing

Laptops automatically disconnect charging while playing games, which is an extremely annoying problem. To keep the game playing process uninterrupted, see the article to fix the error now!

At present, compact but powerful laptops have become quite popular. This has caused many people to choose to play games on laptops instead of desktop computers. Of course, this is completely feasible and there is nothing to discuss too much. However, when playing games on laptops, many people encounter a situation where the device automatically disconnects from charging, interrupting the entertainment process. To know why **laptops automatically stop charging when playing games**, please refer to the following content.

## What causes the laptop to automatically stop charging while playing games?

As you know, laptops are designed to be compact and can be carried anywhere. Therefore, this device will be equipped with a rechargeable battery to be able to operate temporarily in places without electricity. However, when playing games with a laptop for a long time, users must definitely plug in the charger so that the gaming process is not interrupted. In case you are plugging in the charger to play a game and the charger automatically stops, it may be due to the following reasons.

## ? The power source you are using has a problem

Power source quality is a factor that directly affects the laptop's charging process. If the electricity is intermittent, sometimes on and off, the charging process will be affected. This can even cause the laptop to stop charging while playing games.

## ? The charger is damaged

The charger is what directly puts power into the laptop. If the charger is damaged, the input power will be unstable or sometimes there will be a complete loss of power. Among the reasons why laptops automatically stop charging while playing, this is the most common cause.

## ? The charging jack is loose

Maybe you and many others have not noticed, the fact that the laptop automatically stops charging while playing games could also be due to the charging jack on the laptop being loose. At this time, the charging connection is unstable and causes a situation where sometimes it can be charged and sometimes not.

## **Solutions for when a laptop automatically disconnects from charging while playing a game**

To ensure the laptop's performance and gaming process are not interrupted. Charging your laptop is extremely necessary. In case your laptop suddenly stops charging while playing a game, you can try a few of the following methods.

### **? Unplug and reconnect the charger**

First, check to see if the charger is connected to the laptop properly. If you notice the connection is loose, unplug the charger and plug it back in. Of course, you should also check and do the same with the connection between the charger and the household power outlet.

## ? Restart the laptop

Maybe for some reason the laptop's charging reception is having trouble. To fix it, try turning off the laptop, then wait about 10 to 15 seconds and then restart.

## ? Change the power source

If you suspect that the power source you are using is too weak (usually happens during peak hours). Try bringing your laptop to another place with a stable power source to test whether the charging interruption still occurs or not.

## ? Replace charger

In case your laptop charger is too old and has been affected by physical impacts. Try changing to a new charger and the problem of automatic charging disconnection when playing games on your laptop may be resolved. (note: the new charger must have the correct specifications for the charger you are using).

**With the information just now, I hope you will be able to overcome the problem of your laptop automatically disconnecting from charging while playing games. However, if things still don't get better after you've followed the instructions. This is when you should take your laptop and charger for inspection.**
