GT660 is equipped with powerful Intel Core i7 processor and the ability to upgrade RAM up to 12 GB (with three slots on the body). In particular, the graphics power of the device will make many gamers happy with discrete Nvidia GeForce GTX 285M graphics card with 1GB VRAM capacity.

In addition, MSI's new model will also be preinstalled with Windows 7 operating system and equipped with a new generation USB port.

There is currently no information about the selling price of this product.
