

Laptop 'transformed' two screens of Asus

Asus Taichi owns two screens that make this product both a tablet and a laptop with a true keyboard.

The external screen also has the same visibility as the inside. *(Photo: Quoc Huy).*

Along with two Tablet 600 and Tablet 810, Asus today also released the Asus Taichi model with the style of a regular laptop but can turn into a tablet when folded by a second screen on the outside. This product has two models with dimensions of 11.6 inches and 13.3 inches (each model has two internal and external monitors of equal size).

Asus uses IPS / FHD panel and LED backlight on the new Taichi series to maximize the ability to experience the image of the product. The resolution is 1,900 x 1,280 pixels. Although owning two monitors, this model still has a light and slim design with the same parameters as its previous Zenbook line.

Taichi is both a laptop and a tablet. *(Photo: Engadget).*

When opening the lid, this product is used like a regular laptop with an instant keyboard (not a removable form like Tablet 600 and Tablet 810). When closing the lid, users can press the external Windows key to activate the upper screen to use as a regular tablet.

Asus Taichi uses Intel Core i7 3rd generation processor, 4 GB RAM, SSD hard drive, standard Wi-Fi and two cameras. The keyboard of the device has backlight used in low light conditions. On the sides are power keys, screen lock keys, miniVGA, USB 3.0, microDVI, volume up and down keys, screen rotation lock and power jack.

The selling price of this product and the time of the shelf is not yet revealed.
