

# Laptops are made from disposable recycled paper

The idea of ??laptops made from recycled and disposable paper was made possible by Yanko Design graphics expert.

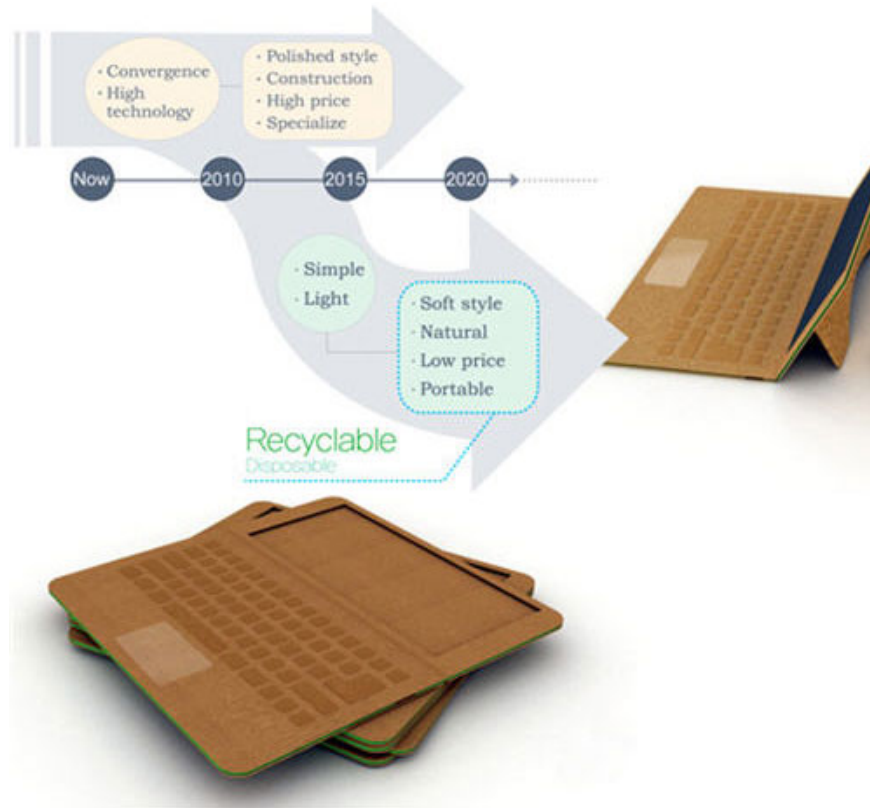

**The idea of ??laptops made from recycled and disposable paper was made possible by Yanko Design graphics expert.**

These idea laptops have a lot of positive points in protecting the environment but ensuring convenience when used only once. In fact, disposable phones or cameras have been around for a long time. But to pack all the necessary hardware components in a laptop frame with paper or cardboard would be a big challenge for any graphic design expert.

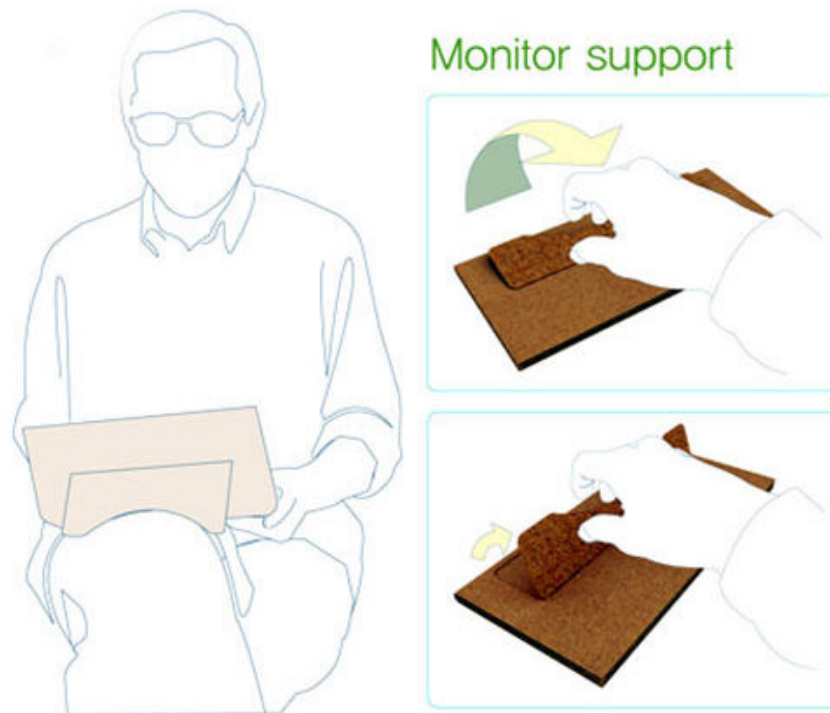

Yanko Design's Je Sung Park graphics technician has designed the laptop with this idea in a reasonable way.

Do not use the touchpad but these laptops have touch screens.

It may take years to bring these laptops into production.

But the design is complete, the laptop has a screen stand.

## Overview of Design

As times go by, computers are fast becoming more advanced and highly-efficient tools. Also, a user wants an easy-use computer. Until now the computer has symbolized advanced technology. We need an advanced computer. We also need the computer that is easier to use anytime and anywhere in the future. Now disposable cameras are still in common use throughout the world. Disposable cell phones have been released recently too. Future technology users will need all of the digital products in a disposable form. So we should develop the disposable computer too.

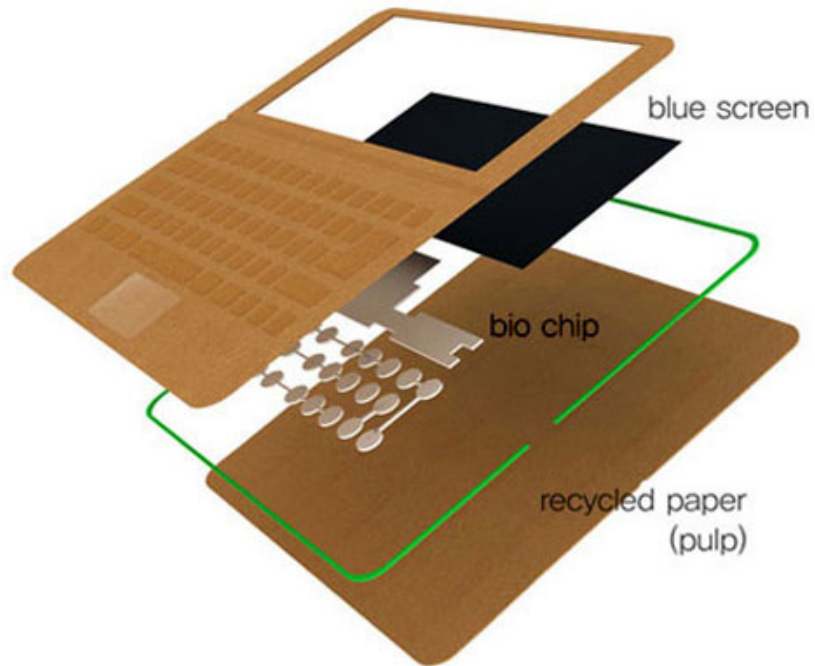

The Recyclable computer uses recycled paper or pulp material for a nature-friendly solution. Also, the computer has separate "layers", so that things can easily be replaced and changed. The external casing uses recycled paper or pulp, instead of metals or plastics. So that you can even recycle your casing, if it gets damaged, or used.

This model has touchpad but smaller screen.

## Ecology

Change outward of material how use recycling material or recycled paper instead metal or plastic. So it can solve problem of disposable products, the disposable computer will be separate collection, So will recycling again.

Shells and floor components.

The finished machine frame can be packed like this.
