

Laptops with the best built-in speakers

All laptops today come with a built-in sound kit. However, most of them are not high quality and only meet the extremely basic needs.

All laptops today come with a built-in sound kit. However, most of them are not high quality and only meet the extremely basic needs.

The cause of the problem lies in the price, power consumption, the needs of users . In fact, for fastidious people in sound requirements, equipping yourself with a headphone or speakers much more convenient.

However, if you want to own a laptop with relative sound quality, then you can refer to some of the following laptop models. They are appreciated for the quality and usability of integrated speakers. However, readers should also note the "good" geography here is to stop "acceptable" to fastidious users, but not perfect.

Asus NX90JQ - "King of sound"

The first representative mentioned in this article is the "super laptop" entertainment from Asus: Asus NX90JQ. Was introduced at CES 2011 held earlier this year, Asus NX90JQ has caused strong problems with its pit design.

Referred to as the "Desktop Replacement" form, of course, Asus laptops are extremely large and heavy. Asus NX90Jq has an 18.4-inch screen, but in fact, it is much bigger because the side speakers are installed on the sides of the screen. Thus, Asus laptop model is highly appreciated for sound quality by owning Sonic Master

loudspeaker system from world famous producer Bang & Olufsen. The sound quality of this laptop is appreciated by many famous technology websites in the world like Engadget. There are many opinions that this is the laptop with the best integrated speakers in the world.

Specifically, the laptop speaker is much bigger and more powerful than the regular laptop when equipped with the technology of B&O with ICEpower Code and a Class D amplifier. The speaker is 25mm in diameter and 25% bigger than the other speakers regular laptop. As a result, it can produce four times the sound of a speaker on a regular laptop. With BO's codec and BO, NX90JQ shows good sound even when turned on. It seems that the noise reduction technology of BO works well on Asus laptops.

Of course, everything depends on the type of music you listen to. When listening to opera, the loudspeaker works well even when it is loud, with little noise but with rock, when turned on, the sound is slight distortion. But importantly, the NX90JQ's voice is extremely clearer than any laptop tested by PCW before.

Owning configuration is also "desirable", Asus NX90JQ is equipped with Core i7 CPU, Nvidia GeForceG GT 334M, hard drive can be up to 1280GB, Bluray and USB 3.0. Asus laptop deserves your "home theater". NX90JQ is equipped with two touchpads. However, this "theater" also has many weaknesses. With its size and weight, the Asus NX90JQ is a "PC replacement" laptop, but it will be a nightmare to imagine this "theater" on the back every day. In addition, relatively low battery life is a major drawback of the model. It's easy to understand because the speaker system is "power-hungry" near by a low-configuration laptop. In addition, the price of this laptop is not very pleasant: 2,500USD (more than 50 million VND).

Besides, you can consult other representatives in Asus' "" s "family, which are also equipped with SonicMaster technology from B&O, so most of them have very good sound quality.

Dell Studio XPS 16

Dell Studio laptop line is too familiar to users in Vietnam. With good price / configuration features, eye-catching design, Dell Studio quickly conquered Vietnamese youth.

Another outstanding feature of the Dell Studio XPS 16 is great sound (of course compared to laptop "community"). With two stereo speakers and an integrated subwoofer, the Dell Studio XPS 16 delivers excellent sound quality. The sound of the Studio series is generally relatively low, warm and if not too fastidious, you can see it provides great sound, even high and medium, even deep bass. The product's speakers are located on either side of the keyboard, the lower surface extends by the height of the keyboard.

The model has many configurations to choose from, the reference price is over 1100 USD (over 22 million VND).

Toshiba Qosmio F60

Not so popular in Vietnam but not so that we can remove Toshiba laptops. The design, configuration and other important features are all average, but the most memorable feature of Toshiba Qosmio F60 and some of its "brothers" like the NB520 are extremely good sound quality.

Possessing Harman / Kardon "brand name" speakers to bring standard sound, Toshiba has conquered most customers. Clear sound, smooth, strong, powerful bass, laptop. Besides, the speakers of the F60 are relatively clear, well sounded even when adjusting the large volume. Of course, with its expensive built-in speaker system, the F60 has more volume than regular laptops. If you have to "find the hair", the imperfect bass is the only drawback of this sound system.

In particular, compared to the above mentioned laptops, Toshiba Qosmio F60 costs only about 20 million dong - an acceptable price. Even, the "brother" NB520 is only over VND 10 million and is optimized for listening to music (can listen to music all the time . has turned off). If you want to enjoy the sound of "superb", the Qosmio X500 will be a worthy choice. With the "big" configuration, the big body, the X500 shows a slightly better bass than the "brother" F60. However, the reference price of 40 million and the huge "size" of the device is really a big barrier.

MSI GT660

MSI laptops for gamers really bring a great audio experience. Equipped with two external speakers in the camera body plus woofer, MSI GT600 offers a great audio experience for users. Voices are expressed relatively clearly, sound types are easily distinguished. As in the LMG review, the author can distinguish between lead and guitar. Moreover, with the laptop for gamers, GT600 shows the sound of the game quite well: with 2 clear speakers, the player can even distinguish the direction the enemy is coming. In addition, bass is highly appreciated. "Huge" volume is also a plus for the sound system of GT600 when it can completely play the sound system at the party.

Of course, in addition to the excellent sound quality, as a laptop for gamers, MSI GT660 also possesses high configuration and eye-catching appearance design. With Core i7 CPU, 4GB RAM (can be upgraded to 12GB), 1TB 7200rpm hard drive and full of connectivity ports like other entertainment laptops. MSI GT660 weighs more than 3 kg and is relatively "chat": 1800 USD (more than 36 million VND).

If you hear the sound of these laptops and you are still not satisfied, perhaps you belong to about 5% of laptop users who are very fastidious about sound, in which case we strongly recommend investing in a headphone or High-end speaker set.
