Here is the latest FIFA rankings and the latest FIFA scoring method

FIFA rankings are systems that rank men's soccer teams in Football League. Currently the leading position in the FIFA rankings is Belgium. The rankings will be based on the results of the matches and the team with the most wins will be ranked the highest.

This bonus is based on the results of international matches recognized by FIFA. Before the current ranking system, the ranking is based on the team's performance in the last 4 years. With more results and more important matches, it has a bigger impact on helping to bring a high position to the team.

The FIFA rankings were first introduced in December 1992. The ranking system was repaired after the 2006 World Cup with an important announcement about the new ranking chain launched on June 12, 2009. And it was Improvements are based on the chess system of chess and Go Go on August 16, 2018. Here is the latest FIFA football FIFA World Ranking.

1. The fastest way to view VTV3
2. Sopcast Link, Ace stream watching live football
3. How to use Onme to watch television, movies, football

## How to calculate FIFA ranking points

Above I have shared the method of calculating FIFA points changed from 2018 according to the method of calculating Elo plus / minus points (as opposed to the calculation of the current average). Will produce a much more consistent result than the current score of the teams.

Friendly matches will not be as important as the finals, such as World Cup matches. The knockout matches will be more important than the group stage matches.

This is the new calculation formula:  $P = P_{\text{before}} + I * (W - W_e)$  in which the values ??of the characters will be arranged as follows:

**P<sub>before</sub>**: Score before the match

**W**: result of the match - win = 1, draw = 0.5 and lose = 0.

**W<sub>e</sub>**: weight on the importance of the match.

$W_e = 1 / (10 * (-dr / 600 + 1))$  where dr is the difference in the ranking of the 2 teams, ie dr = (the P<sub>before</sub> of team A - P<sub>before</sub> of team B).

**I**: The importance of the match. Be distinguished by the following score:

1. **I = 5**: Friendly matches are held outside the International Fixture
2. **I = 10**: Friendly matches are held in the International Fixture
3. **I = 15**: The match belongs to the group stage in the regional tournament
4. **I = 20**: The match is in the knockout and finals in the regional tournament.
5. **I = 25**: The match belongs to the continental or World Cup tournament qualifiers.
6. **I = 35**: The match starts from the group stage to the quarterfinals of the continental tournament finals.
7. **I = 40**: The match starts the quarter-finals on the continental tournament finals and all matches of the FIFA Confederations Cup.
8. **I = 50**: The match starts from the group stage to the World Cup quarter-finals.
9. **I = 60**: The match starts from the quarter-finals of the World Cup.

The first advantage of this new calculation is to allow a smooth transition from the current BXH formula to the new formula. The position of members in the current FIFA rankings will not be affected.

The formula for calculating the current annual GPA will be removed. Issues arising from the old recipe will be minimized or disappear completely. Including losing points over time or the results of friendly matches that affect position on the rankings.

The weights based on the current continent will be removed. For example, a European weight of 1.00 or North America with a weight of 0.88 will be removed. This will help teams around the world have equal opportunities to improve their position on the rankings.

For new types of matches and weights will be used to distinguish the importance of the match. For example, a friendly match will have a lower weight than the World Cup match.

The ranking of the home team of the finals will not be affected as the old formula. Therefore homeowners can play friendly matches to improve their performance.

The Elo method scoring system is recognized as very fair in sports not just football. Teams will score based on the results of the competition and the relative strength of the opponent.

Therefore, if a weak team beat a strong team, it will win more points than a strong team to defeat weak teams. This is a fair and logical concept.

Above is the latest FIFA rankings and the new way of calculating the FIFA rankings, with this formula you can calculate the points of the teams in the countries you follow.
