

Launched CMC 2010 anti-virus software version

On April 4, 2010, more than 4 million computers of users and customers completed the upgrade of CMC AntiVirus antivirus software and CMC Internet Security 2010 version.

On April 4, 2010, more than 4 million computers of users and customers completed the upgrade of CMC AntiVirus (CMC AV) antivirus software and CMC Internet Security (CMC IS) 2010 version.

Before that, exactly 00:00 on January 1, 2010, 2010 version of CMC AV software and CMC IS has been put into the system by security firm CMC Infosec. Beginning in the new year 2010, updates and upgrades are done automatically when users start the computer and have an Internet connection. Users without an Internet connection can download the 2010 version from the address: www.cmcinfosec.com To 08:00 on April 4, 2010, according to the automatic report from the system, 4.15 million computers of users and customers has completed the update, upgraded from version 2009 to version 2010, equivalent to about 90% of people using the existing anti-virus software CMC. According to the announcement of CMC Infosec Company, the upgrade from CMC AV / CMC IS 2009 version to 2010 version is free.

Since 2010, the anti-virus product line of CMC is divided into 04 products: **1 / CMC AntiVirus** : Free for individuals and households; **2 / CMC Internet Security** : The paid version has many outstanding protection features; **3 / CMC Internet Security MegaVNN version** : The version given by VNPT to users of MegaVNN transmission line has the same features as the paid version; **4 / CMC EndPoint Security** : Comprehensive protection version for businesses.

Compared to the 2009 version, CMC AV / IS 2010 has made remarkable progress in speed, core technology and interface, the achievements of over 1 year listening to feedback from users and continuously improving. So far, the database of virus / malware samples that CMC has identified is **2,384,985** samples, double that of the same period in 2009. That means during 2009, security firm CMC InfoSec maintained the level. update about 100,000 new virus / malware samples every month. *'With the growth and spread of viruses, in 2010 the number of new virus / malware samples could reach 150 thousand / month. However, we are committed to speeding up users and customers to be protected against new risks ,'* said Mr. Trieu Tran Duc, CMC General Director of Infosec.

CMC AV 2010 added *a personal firewall feature* to enhance computer protection when joining the Internet. Meanwhile, the **CMC IS 2010 version** has added enhancement to *Internet content filters* , helping parents manage their children's Internet use more easily. In particular, **CMC EndPoint Security 2010** is equipped with **'Intrusion Prevention System'** , which helps businesses stay safe from every virus outbreak, even if the operating system has not fully updated the patches.

The interface of CMC AV / IS 2010 is refined to be more sharp and refined. *'Our view is to make the interface more professional but not affect users ' habits ,'* said Trieu Tran Duc.

In 2010, CMC InfoSec will continue the roadmap to release new patches and new utilities based on user comments. This is a job that CMC Infosec has paid special attention to and has done better and faster than other security firms in the past year. *'In addition to continuing to listen to users' suggestions, CMCLab is also urgently preparing to launch breakthroughs in core technology. Users will see the scanning speed of CMC increased by 20-30 times only in 2010. That means, with less memory and CPU, a computer that is scanning for 2 hours will only need 5 minutes to completed'* , Mr. Trieu Tran Duc revealed the next version of CMC AV / CMC IS 2010./.
