

Leading the trend, ASUS officially launched a pair of video mining cards specializing in mining

Engineered specifically for mining, ASUS Mining RX 470 and Mining P106 promise performance, durability and 36% faster plowing speed.

On June 21, ASUS officially announced a duo of new video cards named Mining RX 470 and Mining P106 for the world's mining community, with extremely high mining performance and maximum cost. minor.

Compared to conventional graphics cards, Mining P106 offers up to 36% faster mining ability. This product has also been refined to be able to operate continuously 24/7 for long periods. In addition, with the included GPU Tweak software, Mining RX 470 and Mining P106 users can easily adjust the clock and voltage according to each coin and each different need, for high cost-performance ratio. possible.

2-ball bearing fan reduces friction for 2X longer lifespan

Both Mining RX 470 and Mining P106 are equipped with 2 fans with advanced technology, using 2 ball bearings and air friction reduction.

Compared to traditional fans, which are prone to oil drying after long periods of use, the 2-ball bearing fan system extends Mining RX 470 and Mining P106 fan life by 2 times. In addition, thanks to the ability to reduce friction with the air, the fans of this video card duo will run smoother, increasing heat dissipation efficiency and product life.

IP5X dust resistance helps to increase fan life

Mining RX 470 and Mining P106 are both designed for long-term and continuous use, so ASUS has added dust-proofing to its fan system, meeting IP5X standards. This standard means that the fans of Mining RX 470 and Mining P106 have good dust resistance during operation, even in the harshest environments.

Auto-Extreme Technology, standard SAP II components and GPU Tweak II software

The ASUS mining card series is manufactured using exclusive Auto-Extreme technology - 100% automatic at every step, using Super Alloy Power II components for optimal, economical performance. Low energy and temperature during operation.

The duo Mining RX 470 and Mining P106 also come with ASUS exclusive GPU Tweak II software, which makes it easy for users to customize clock and voltage, to provide the best mining rate and speed possible.

ASUS Mining RX470

Clock: 926 / 1206MHz

Memory clock: 7000MHz

Memory: 4GB GDDR5

Memory protocol: 256-bit

Connector: DVI-D

ASUS Mining P106

GPU clock: 1506 / 1708MHz

Memory clock: 8008MHz

Connectivity: PCI Express® 1.0

Memory: 6GB GDDR5

Memory protocol: 192-bit

In particular, the Mining P106 will not be equipped with an output port to optimize costs.

Price and time of appearance

ASUS Mining RX 470 will be available worldwide in July, while Mining P106 will only appear in China and Eastern Europe markets in July.

Unpack ASUS Prime X299-Deluxe: ready for Intel Skylake-X
