

Leakage of watchOS 7's features: sleep tracking, watch face sharing, and more

watchOS 7 and iOS 14 will bring big changes to Apple Watch.

It looks like Apple is getting ready to roll out a few major changes on watchOS 7. The 9to5Mac news site says the next major update for Apple Watch, watchOS 7, will be equipped with sleep tracking - evidence shown in the leaked source code of iOS 14. At the same time, watchOS 7 is also expected to have additional features to help users achieve sleep-related goals in the Health app on iPhone, and this feature. It will also be used to improve sleep time and quality. Sleep tracking on the Apple Watch has been rumored for months.

A major addition rumored to appear on watchOS 7 is the ability to share watch faces with friends and family. This feature will allow Apple Watch users to share watch faces from the Watch app on iOS. While this doesn't mean Apple Watch users will be able to use custom watch faces comfortably, at least that's a welcome start.

watchOS 7 will also include a new watch face called Infograph Pro with a tachymeter cluster. Tachymeter is used on analog clocks to measure the speed based on the time elapsed on a fixed distance. And yet, watchOS 7 will bring parental controls to the Apple Watches worn by their children, improve photo faces, and change Watch apps so they no longer have to rely on them. extensions.

Apple usually publishes detailed iOS and watchOS roadmaps at the company's Worldwide Developers Conference (WWDC), which takes place in June each year, but so far it hasn't announced the date for WWDC 2020. The Corona virus pandemic is booming, and its impact on tech conferences this year, it's hard to be sure when we'll hear more about iOS 14 and watchOS 7.
