

Leaked images Galaxy S9, Galaxy S9 +, fingerprint sensor under the camera

The latest leaked images of the Galaxy S9 and S9 + show that the fingerprint sensor will shift from being located next to the rear camera - like on the Galaxy S8 - to below the rear camera. This also means that Samsung Galaxy S9 still has no fingerprint sensor under the screen.

The latest leaked images of the Galaxy S9 and S9 + show that the fingerprint sensor will shift from being located next to the rear camera - like on the Galaxy S8 - to below the rear camera. This also means that Samsung Galaxy S9 still has no fingerprint sensor under the screen.

Sensor for measuring heart rate and LED on the right side of the rear camera. USB-C port, microphone, speaker and 3.5mm jack located below. The volume rocker on the left and the power off button on the right. Galaxy S9 will have 5.7 inch screen with dimensions of 147.6 x 68.7 x 8.4, the bottom bezel is thinner than S8 0.1mm.

The design of S9 and S9 + is like upgrading S8, not really different

The design of Galaxy S9 is similar to the S8 version. The screen does not have a bezel, S9 does not have a dual camera on the back which is exclusive on the S9 +.

Galaxy S9 Plus will have two cameras behind

Galaxy S9 + has a similar design, in addition to having dual cameras behind. The phone is 157.7 x 73.8 x 8.5 with a 6.1-inch screen, the upper and lower bezel is thinner than the Galaxy S8 + 0.1mm.

Users named OnLeaks share pictures of S9 and S9 + but remember that this is only a CAD rendered image, not a real image. In addition, there are images shared by Ice Universe showing that the design of S9 is quite similar to S8.

According to Bloomberg, Samsung will announce its new flagship phone in February. If it is, this will be the earliest announcement since usually in March or April Samsung speaks.
