

# Leaked the first real image of Samsung Galaxy S11, the most anticipated smartphone in the first half of 2020

Although it is nearly 3 months before the official launch, the design prototype as well as specifications of Galaxy S11 leaked relatively fully.

As planned, the Galaxy S11 will be officially launched by Samsung in late February, and will also be the most sought after flagship model in the first half of 2020.

Although it is nearly 3 months before the official launch, the design prototype as well as the specifications of the Galaxy S11 have been leaked relatively fully, showing a quite complete view of the phone that has received many periods. Hope this. Not stopping there, the 'holy leak' of Ice Universe recently continued to upload 2 leaked images that are believed to be the actual design of the commercial Galaxy S11 version.

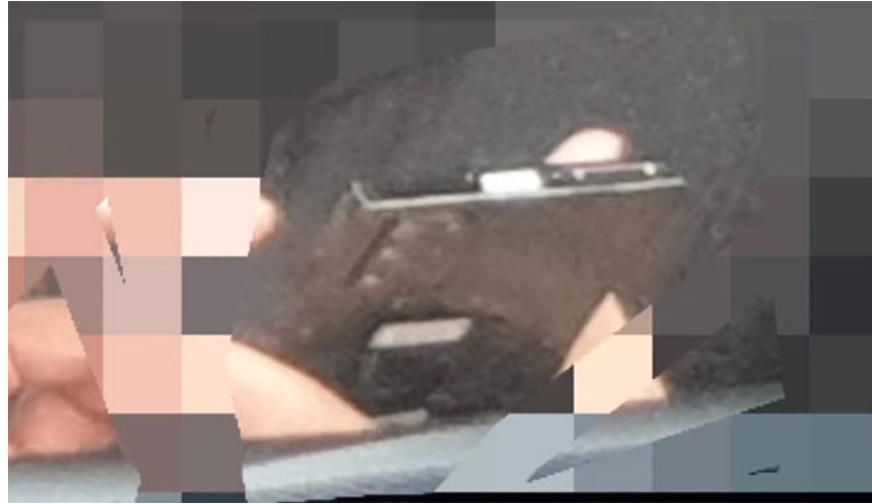

2 leaked images are of poor quality, but still show relatively clearly the back design of the Galaxy S11 with the most prominent part is the rectangular multi-sensor camera cluster (4 sensors), large version, and especially protruding quite a lot compared to the back of the machine. This may make many people unhappy, but with a device with a 4-lens camera cluster (3 conventional cameras and a 3D ToF sensor) with a primary 108 Megapixel sensor, a 5x zoom lens like the Galaxy S11, such thickness is completely acceptable. In a related move, SamMobile said this camera cluster will protrude at least 1.1mm from the back surface.

Combining all the leak rumors so far, we have a flagship with the ability to support both 4G and 5G, equipped with Qualcomm Snapdragon 865 or Exynos 990 flagship CPU (depending on the market). There is also the appearance of a 4-megapixel camera cluster with a resolution of 108MP that supports 5x optical zoom, an all-

new 'Dynamic AMOLED' panel with a refresh rate of up to 120Hz at the same level. QHD + resolution, support HDR10 + and under-screen fingerprint sensor. Support 25W fast charging.

Speaking more about the design, you'll find the volume and power buttons on the right edge of the device. While on the bottom will be the placement of a USB-C charging port in the middle, the right speaker on the right and the recording microphone on the left. Galaxy S11 is expected to own a size of 161.9 x 73.7 x 7.8mm (including the camera assembly is 8.9mm). The device will have a glass back and a metal frame.

Without any changes, Samsung Galaxy S11 will be released on February 18, 2020.
