

# Leaked the Stable version of Microsoft Edge browser using Chromium kernel, invited to download and experience

This Edge Stable can be considered a complete version and is ready to be released in place of the old EdgeHTML.

Recently, Stable - the stable version of the Edge browser using Microsoft's Chromium core has been leaked. This Edge Stable can be considered a complete version and is ready to be released in place of the old EdgeHTML.

This build has a code of 77.0.235.9, you can download and experience this version here.

Unlike the version for developers or Canary versions, this Microsoft Edge version is the final standard version with features that have been thoroughly tested and released to users so it is rated fairly stable.

Following the notes from the mspoweruser page, the old Edge version may be deleted and replaced completely when you install the new Microsoft Edge version. Also the smiley icon (Feedback button) that appears next to the avatar of the User Profile will no longer be available.

1. There is an Edge Chromium browser, invite download and experience
2. Microsoft Edge Chromium has a feature that restricts videos from automatically playing, inviting experience
3. 7 reasons you should try Microsoft Edge Chromium once instead of Google Chrome
