

## Leaking image of Pixel 4: Finally, Google also 'suffered' with multi-sensor camera cluster?

The launch of products for the end of the year shopping season is coming and the present time is when many people are curious to see if smartphone products from the world's leading manufacturers in the second half of this year look how.

The launch of products for the end of the year shopping season is coming and the present time is when many people are curious to see if smartphone products from the world's leading manufacturers in the second half of this year look how.

A few weeks ago, the leaked images of the Galaxy Note 10 have "destroyed" many technology forums around the world, creating lively debates about the situation of smartphone market in the future. For now, the 'specialist' leaked the image @OnLeaks is also showing the world what the most likely look is first about what two of Google's popular flagship Pixel 4 and Pixel 4 XL models look like.

*@OnLeaks leaked images launched*

1. Give up your smartphone to use a flip phone for 1 week, get 1,000 USD right away

@OnLeaks had a series of photos of the exterior design of the top two Pixel 4 and Pixel 4 XL smartphones. Of course, it is still not 100% sure about the authenticity of these photos at the present time, but 'history' shows that leaked photos @OnLeaks often have quite high accuracy, almost like Commercial version of the product.

Temporarily put aside the information on the sidelines. Looking at the leaked photos, you'll find there are some interesting things to note. The first and most obvious is the giant square camera on the back of the product. It looks unreliable, almost similar to the first leaked versions of the iPhone 2019, but at least does not appear to be 'uncool' to an unreasonable level like on Apple products.

1. The strongest Android 10 smartphone chart as of May 2019

More importantly, the appearance of this camera cluster suggests that Google will eventually catch up with the rest of the market and deploy more rear cameras. Previously, Google luoaan was steadfast in its philosophy of creating a perfect single camera cluster that would be more efficient than running multi-sensor trends. And indeed this philosophy has been proven clearly by Google through two Pixel 3 and Pixel 3 XL models are still the best photography smartphones in the world today, although only own one rear camera. This success is partly

due to the company's superior software technology.

*Another view of the back of the product*

1. Invite to see Samsung's Galaxy A80 'hot' BlackPink version

However, only the support of the software will not be enough - in some specific cases. The super-resolution zoom of the Pixel 3 doesn't seem to fit very well with a single telephoto lens on the device, and there's no way for you to capture super-wide shots on Pixel 3 and Pixel 3 XL without having to use it. Use to panorama mode (panorama).

Even the main sensor of the Pixel 3 (hardware) is also significantly worse than similar devices found in Huawei P30 Pro or OnePlus 7. However, Google takes advantage of image processing, compensation To tell the disadvantage of the hardware, so the images will be better quality than the opponent even though the hardware is not equal. That is why it is said that the superior software system is the factor that helps Pixel 3 and Pixel 3 XL get into the list of the best camera phones, not good hardware.

Some other aspects to note from the leaked photos:

1. Without the appearance of a conventional physical fingerprint sensor, it is more likely that Google will follow the path of integrating fingerprint sensors in the screen or completely abandon this traditional biometric login form and switch to use facial recognition technology.
2. There will still be no 3.5mm headphone jack
3. There are the presence of speaker grids next to the charging port, indicating that the speaker placement for this new product will be slightly changed compared to its predecessor.
4. The front facing speaker is placed higher than on the Pixel 3 XL.

Again, this is not an official picture of the Pixel 4, so all information is for reference only. OnLeaks warns that this is just a 'first glimpse' for this product, so they will not give a lot of in-depth comments, at least until the leaked images are clear and read. more details appear.

*A clearer image of the rear camera cluster on the Pixel 4*

1. Discover the hottest slider camera designs in the smartphone market today

In addition, another famous leaker also said that Google has three independent design teams in the Pixel 4 project, and the company will choose the design with the highest aesthetics, avoiding the situation like on Pixel. 3 XL - the software has nothing to complain but looks too bad.

*Up to 3 design teams operate independently in the Pixel 4 project*

1. 238 applications found on Play Store contain malicious code that paralyzes smartphones

So, the leaked images you see above are probably only one of three Pixel 4 designs. However, even if the final device doesn't look like this, the Pixel 4 will definitely is still a product that contains many improvements in appearance and hardware, simply because Google will be forced to change if they do not want their products to fall behind.

Let's wait for the next leaked images of this cult smartphone.
