

How to use DNSCrypt on Windows 10 PC

Although DNSCrypt is available on all platforms, including Android and iOS, but within the framework of today's article, we will only discuss Windows 10 PCs. Many third-party applications are available - i.e. The client machine, can be installed on the device and even on the router. These tools use multiple DNS resolution layers to make it more secure.

One such software called Simple DNSCrypt, provides two layers of DNS security, a leaked VPN lock, poorly configured DNS, fixing incorrectly entered URLs and speeding up your browsing experience. It can also create logs, block addresses and domains.

You should know DNSCrypt is also available for servers. Some clients were known as DNSCrypt-Wrapper, Unbound by NLnetLabs, supporting both DNS-over-TLS and DNSCrypt; dnscrypt of PowerDNS, supports both DNS-over-TLS and DNSCrypt; DoH-proxy of Facebook, supports DNS-over-HTTP / 2 (DoH) and rust-DoH, supports DNS-over-HTTP / 2 (DoH).

A review of a light DNSCrypt client for Windows, full of details along with installing it on Windows 10 PC already on Quantrimang. Read it, if you are interested in installing DNSCrypt on your Windows computer.
