What is Samsung Addwash washing machine?

Samsung Addwash washing machine is a breakthrough of Samsung giant to bring consumers a quality product to optimize the washing process.

According to Samsung research, 85% of users want to add clothes to the washing machine when the machine is operating. However, for current front-loading washing machines that do not have this function, the design of the front-loading washing machine can only be opened when the water level inside the washing bucket is low enough. And more than 50% of users surveyed are concerned that opening the washing machine door may result in water overflow or even damage the washing machine and other safety problems that may occur.

And then, those users' concerns were perfectly resolved by Samsung Addwash.

Accordingly, with Samsung Addwash washing machine, you can add clothes or fabric softener at any time of the washing cycle without affecting the safety and durability of the machine.

In Vietnam, on September 8 at JW Marriott Hotel in Hanoi, Samsung launched this new generation AddWash washing machine.

Learn the smart features of Samsung Addwash washing machine

Here are the outstanding features available in Samsung Addwash washing machine line:

Smart extra doors make it easy to add clothes

For people who are busy or forgetful, it is very easy to leave the clothes unpaid. However, with conventional front-loading washing machines this is impossible.

Samsung Addwash's side door feature has been created to help you completely change your habits of washing. A small side door, located right on the main door of the machine to help users to put clothes and water discharge at any time they want.

Just one operation with the Pause button (pause) means you can quickly remove the forgotten clothes, fabric softener or clothes to continue the washing cycle.

In addition, Samsung also equipped with safety lock feature to help children stay away from the danger if they accidentally opened the door.

Samsung ecobubble™ technology

This technology has the ability to dissolve detergent powder with air and water to make it easy to penetrate and wash into each fiber. The process is 40 times faster than usual, which will help the washing process more quickly, and the cleaning efficiency is higher.

Digital Inverter technology

This is no longer a strange technology for users, even for conventional washing machine products Samsung has integrated this modern feature.

With Inverter technology, the machine will operate smoothly, more sustainably, minimize vibration and especially it is capable of saving power effectively. Another plus is that Samsung Addwash inverter washing machines often have a very long warranty of up to 11 years to help users feel secure when using.

SuperSpeed ??super speed washing feature

This is an extremely unique feature that impresses customers of Samsung AddWash washing machine. Can you imagine that, instead of a few hours for a washing cycle, now you only need 59 minutes to help with the same amount of clean clothes? With Speed ??Spray, the Speed ??Spray helps to maximize the time of draining and squeezing, while always ensuring the washing efficiency and without damaging the fibers.

Smart Control feature

With this smart feature, you can now fully control the use of remote washing machine via the Android or IOS smart phone application. The control and capture of the washing machine state, the time of washing mode has

never been so easy and convenient. In addition, this feature also helps you give time to add clothes, fabric softener, washing water to the machine to bring a lot of convenience for the use process.
