Lenovo has officially announced the price of the previously revealed ThinkPad X131e netbook. As expected, this model will be sold for \$ 499 (equivalent to 10.3 million).

The information "leaked" about the previous netbook model shows that it has an 11.6-inch screen resolution of 1,366 x 768 pixels. Users can choose to use one of the AMD E-series chips or Intel Celeron or Core i3. If you use an AMD chip, you will have the Radeon HD 7310 or 7340 graphics included, while Core i3 processor users will only have Intel HD 3000 Graphics integrated graphics. Manufacturer said, this model has durability beyond the standards of the US military.

According to *Notebookcheck*, the ThinkPad X131e has 8GB of RAM. Customers can choose 320GB, 500GB hard drives or upgrade to 128GB SSD. The Lenovo ThinkPad X131e weighs 1.77kg and has a 6-cell battery that works for 8.5 consecutive hours. This product supports Dolby Advanced Audio technology and a host of connectivity such as USB 3.0, HDMI v1.4, USB 2.0, Ethernet, VGA and four-in-one memory card reader.
