

Lenovo ThinkPad SL300 and SL400

These two products, despite the average price, range from VND 12.9 to VND 15 million, but still inherit the outstanding features of ThinkPad.

These two products, despite the average price, range from VND 12.9 to VND 15 million, but still inherit the outstanding features of ThinkPad.

The Lenovo ThinkPad SL300 and SL400 still inherit the traditional features such as high performance, durability, and security that no other laptop company in the market can overcome. The manufacturer's price for this market is extremely competitive, VND 12,990,000 million for SL400 and VND 15,151,000 million for SL300.

The new ThinkPad SL line still carries the classic lines of previous versions.

The SL300 and SL400 still carry the classic design lines of ThinkPad, stylized at some points to highlight the traditional but glossy, luxurious black tones. The black casing is scratch-resistant, impact-resistant with strong hardened steel bands. The body of the body has a beveled edge that feels thinner, more elegant, lighter and hides the rough, rigid squares that previous ThinkPads have. Scientific layout keyboard, sensitive key, waterproof is a preeminent designed feature exclusively for this line.

With the TrackPoint mouse button in the middle of the red, the keyboard button on both sides of the mouse helps

users determine the key position. Above are the function keys and quick, customized access keys, below are the UltraNav touchpad mouse buttons, on the left are the sound control keys, the right is the indicator light system operating status. Multimedia keys, page scrolls combined with arrow keys. All showed the reasonableness of the Lenovo Thinkpad keyboard design diagram, making it comfortable, convenient and bring the highest performance.

The ThinkPad SL300 and SL400 are all mid-range laptops.

The ThinkPad SL300 and SL400 integrate wireless networking with Wi-Fi Link 5100ABGN and a wide range of standard connections a, b, g and premium n. High-performance computer with processor unit Core 2 Duo T5870 (2.0 GHz / 800 MHz / 2 MB) for SL400-2743-RP7; Core 2 Duo T6570 (2.1 GHz / 800 MHz / 2 MB) for SL400-2743-RP6 and SL300-2738-CTO. 160 GB hard drive, optical drive with Multi Burner multi-layer disc with SL400, and optical drive with one layer with SL300. X4500 integrated graphics card (included in SL400), 4500MHD (included in SL300) for high definition. The components of high-speed gigabit NIC, Bluetooth connectivity, Webcam, FingerPrint fingerprint identification (SL300), 6 cell battery, DOS operating system for SL300 and SL400 are able to respond well to businesses when demand is used. Using laptops instead of desktop computers has become an inevitable trend.

The Lenovo ThinkPad SL300 with 13.3 WXGA LED Backlight screen, SL300 LED technology reflects back for more brightness, making the eyes less subject to regulation when viewed longer. Lenovo Thinkpad SL400 with 14.1 "WXGA LED Glossy screen gives smoother images than traditional screens.

Backlit LED display as well as elegant Glossy LED that saves energy (longer battery life) in combination with VibrantView and anti-glare technology for darker, more realistic, anti-glare, smudge-proof and smooth colors clear. The Lenovo ThinkPad SL series product lines are generally applied to energy efficiency standards such as EPEAT Gold, EPEAT Silver, Energy Star 4.0 and Power Manager power management software to help the computer use the battery for longer. with other low-cost computer models.

This machine has a longer battery than other low-cost computer models.

Lenovo has included high-performance ThinkPad SL, such as proactive protection system (APS), which helps protect the computer's hard drive in any case, ensuring the safety of data, movies, music and documents. APS does this by stopping the reading and writing process on the hard drive within 1 / 1000th of a second when there is any sudden vibration. This helps prevent data errors or document corruption that may occur due to interruption to the hard drive when the user is accessing or saving data. The hard drive read / write process will be reactivated within 1 / 1000th of a second after the system determines that vibration no longer exists. OneKey Rescue System - with just one shortcut, users can restore the system and save important data. This system helps to diagnose where system interruptions occur, ensuring quick and efficient recovery. OneKey Rescue System provides a backup and recovery solution that is implemented both in Windows and even before booting the system.
