

# Lesson 18: Creating a Dropdown Menu in Bootstrap 5

Dropdown menus in Bootstrap 5 are a cool feature you shouldn't miss. Here's how to use dropdown menus in Bootstrap 5.

**Dropdown menus in Bootstrap 5** are a cool feature you shouldn't miss. Here's **how to use dropdown menus in Bootstrap 5**.

## Create a basic dropdown menu.

A dropdown menu is a toggleable menu that allows the user to select a value from a predefined list. Essentially, it would look like this:

Dropdown button

1. Link 1
2. Link 2
3. Link 3

### Detailed explanation:

This class `.dropdown` represents a dropdown menu.

To open this menu, use a button or link containing the class `.dropdown-toggle` and attribute `data-bs-toggle="dropdown"`.

Add a class `.dropdown-menu` to the element to create a real dropdown menu. Then add the class `.dropdown-item` to each element (link or button) inside the dropdown menu.

### For example:

Bootstrap Example

## Dropdown menu

Nút bấm menu thả xuống

1. Link 1
2. Link 2
3. Link 3

# Menu thả xuống

Nút bấm menu thả xuống ▼

## Split dropdown menu

The `.dropdown-divider` class is used to separate the links within a dropdown menu with a thin horizontal border:

1.

---

For example:

Bootstrap Example

## Split dropdown menu

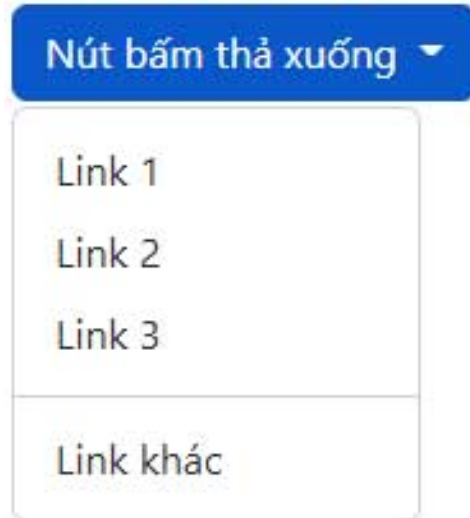

Nút bấm menu thả xuống

1. Link 1
2. Link 2
3. Link 3

---

4. Other link

# Phân chia menu thả xuống

## Dropdown menu header

This class `.dropdown-header` is used to add headers inside the dropdown menu:

### 1. Dropdown header 1

For example:

Bootstrap Example

## Dropdown menu

Nút bấm thả xuống

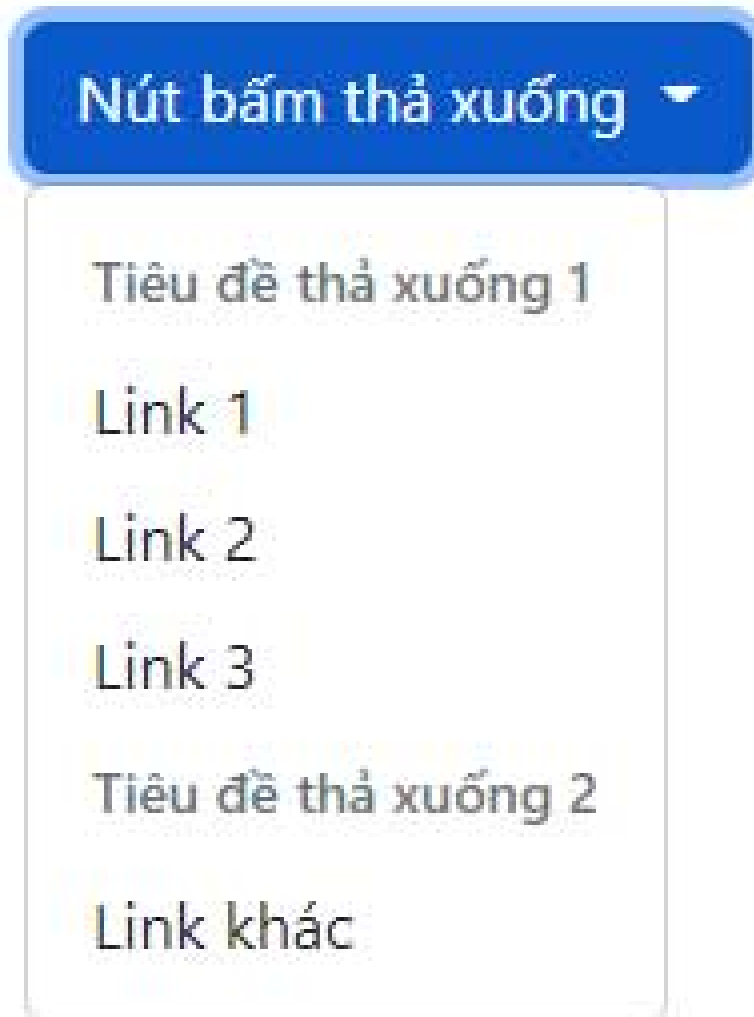

### 1. Dropdown heading 1

2. Link 1
3. Link 2
4. Link 3

### 5. Dropdown heading 2

6. Other link

# Menu thả xuống

## Disabled and enabled items

Highlight a specific dropdown item using a class `.active`(add a blue background color).

To disable an item in a dropdown menu, use the class `.disabled`(which has light gray text and no mouse cursor effect):

1. Normal
2. Active
3. Disabled

For example:

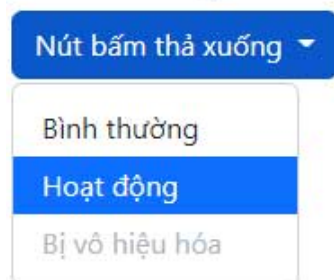

Bootstrap Example

**The dropdown menu has disabled items highlighted in light gray.**

Nút bấm thả xuống

1. Normal
2. Work
3. Disabled

Menu thả xuống có các mục bị vô hiệu hóa bằng màu xám nhạt

## Drop-off location

You can also create a "dropend" (drop-down on the right) or "dropstart" (drop-down on the left) menu by adding the class `.dropend` or `.dropstart` to the dropdown element. Note that the caret/arrow is added automatically.

Drop it to the right:

Drop it to the left:

For example:

### Menu dropend:

Bootstrap Example

## Menu drop-down menu

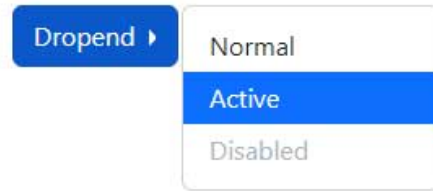

Add `.dropend` next to the dropdown menu to right-align it. Carets and arrows are added automatically;

Dropend

1. Normal
2. Active
3. Disabled

## Menu dropend

Thêm `.dropend` cạnh menu thả xuống để căn lề phải. Dấu mũ và mũi tên được thêm tự động;

### Dropstart menu:

Bootstrap Example

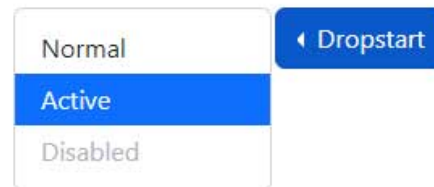

## Dropstart menu

Add `.dropstart` next to the dropdown menu to align it to the left. `Dropstart`

1. Normal
2. Active
3. Disabled

## Menu dropstart

Thêm `.dropstart` cạnh menu thả xuống để căn chỉnh nó về bên trái./p>

## To the right of the dropdown menu

To align the dropdown menu to the right, add the `.dropdown-menu-end` following class to this element `.dropdown-menu`:

For example:

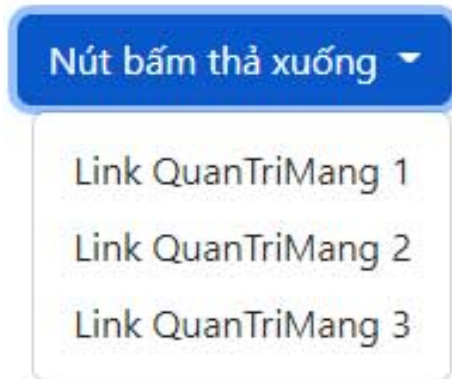

Bootstrap Example

## The dropdown menu is on the right.

Nút bấm thả xuống

1. Link QuanTriMang 1
2. Link QuanTriMang 2
3. Link QuanTriMang 3

## Menu thả xuống về bên phải

## Dropup

If you want the dropdown menu to expand upwards instead of dropping down, change the element with `class='dropdown'` to `'dropup'` :

For example:

Bootstrap Example

## Dropdown menu

The ``.dropup`` class makes the dropdown menu expand upwards instead of downwards:

Note that there must be space for the expandable dropup menu. Dropup button

1. Link 1
2. Link 2
3. Link 3

## Menu thả xuống

## Text dropdown

The class `.dropdown-item-text` is used to add plain text to a dropdown menu or to use links for the default link style:

1. Link 1
2. Link 2
3. Link 3
4. Text Link
5. Just Text

1. Link 1
2. Link 2
3. Link 3
4. Text Link
5. Just Text

For example:

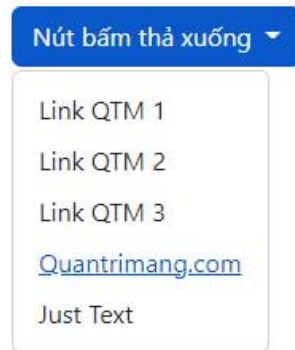

Bootstrap Example

## The dropdown menu contains text or a link.

Nút bấm thả xuống

1. Link QTM 1
2. Link QTM 2
3. Link QTM 3
4. TipsMake.com
5. Just Text

## Menu thả xuống chứa text hoặc liên kết

## Group buttons with dropdown menus

The basic code is as follows:

1. Tablet
2. Smartphone

For example:

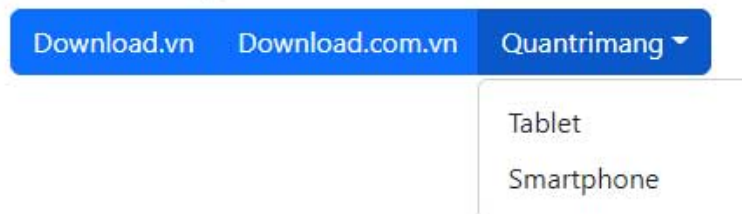

Bootstrap Example

## Nested button groups to create a dropdown menu.

1. Tablet
2. Smartphone

## Nhóm nút bấm lồng nhau để tạo menu thả xuống

## Vertical button layout with dropdown menu

Basic code:

Apple

Samsung

Sony

1. Tablet
2. Smartphone

For example:

Bootstrap Example

## Group the buttons vertically with the dropdown menu.
