

Lesson 27: Scrollspy in Bootstrap 5

Scrollspy is an effect that displays content as you scroll. And you can easily create Scrollspy in Bootstrap 5.

Scrollspy is an effect that displays content as you scroll. And you can **easily create Scrollspy in Bootstrap 5**.

How to create Scrollspy in Bootstrap

Scrollspy is often used to automatically update links in a navigation list based on the mouse scroll position. You can use the following sample code to **create scrollspy in Bootstrap 5**.

- 1. Section 1

Section 1

Try to scroll this page and look at the navigation bar while scrolling!

Detailed explanation:

In addition `data-bs-spy="scroll"`, the element used as the scrollable area (usually the element),

Add the `data-bs-target` attribute with a value of the navigation bar's **ID** or **class**. `.navbar` name (`.`). This ensures that the navigation bar is connected to a scrollable area.

Note that the scrollable elements must match the IDs of the links in each item in the navigation bar list (`match`).

The optional attribute `data-bs-offset` specifies the number of pixels offset from top to bottom when calculating scroll position. This is useful when you find that links within the navigation bar change their active state too early when switching to scrollable elements. The default is 10 pixels.

Relative positioning is required: The element needs the CSS `position`data-bs-spy="scroll"` property, with a value of "relative" to function correctly.
