

# Lesson 36: Form Floating Label in Bootstrap 5

Floating labels are a feature that lets you create simple form labels that stand out above input fields. Here's how to create floating labels in Bootstrap 5.

**Floating labels** are a feature that lets you create simple form labels that stand out above input fields. Here's **how to create floating labels in Bootstrap 5** .

## How to create floating and dynamic labels

By default, when using labels, they usually appear at the top of the input field:

With floating labels, you can insert labels inside input fields, making them float/move when the input field is clicked. Sample code:

```
Email Password
```

For example:

### Floating Label cho trường nhập dữ liệu

Click vào bên trong từng trường nhập để thấy hiệu ứng nhấc nổi:

The image shows a form with two input fields and a button. The first input field has the label 'Email' floating above it. The second input field has the label 'Mật khẩu' floating above it. Below the input fields is a blue button with the text 'Đăng ký'.

Note on floating labels: Elements must be placed after the tag, and the attribute `placeholder` is needed for the element (even if it's not visible).

## Text field

It also works with text input areas. Sample code:
