

Limit download speed for IDM - Limit download speed on IDM

Limit download speed by Internet Download Manager helps you control your Internet speed more efficiently. You have both an internet connection speed to access the network and an effective file download speed.

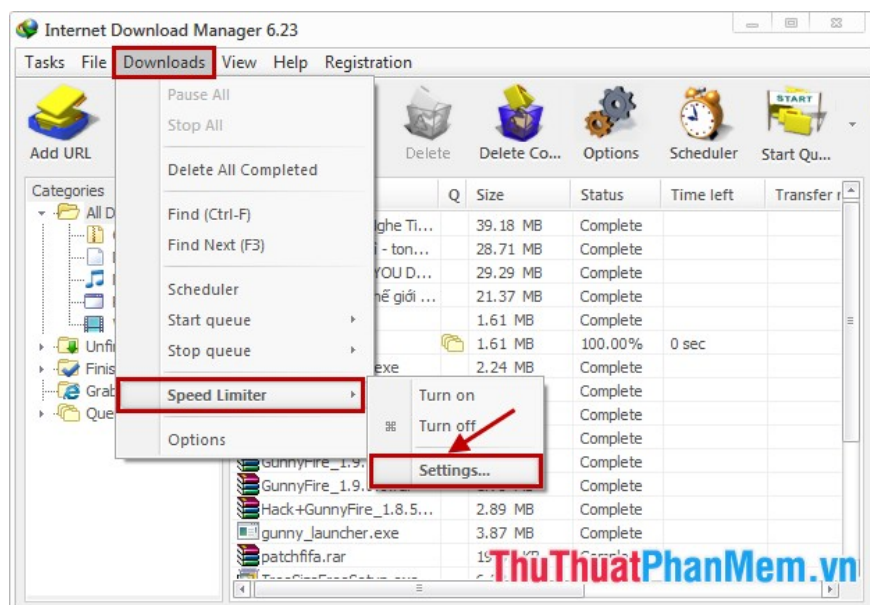

Limit download speed by Internet Download Manager helps you control your Internet speed more efficiently. You have both an internet connection speed to access the network and an effective file download speed. When you limit the download speed by IDM, IDM will not take up much network traffic and you still have enough network bandwidth to access the internet.

The following article will help you how to limit the download speed by IDM.

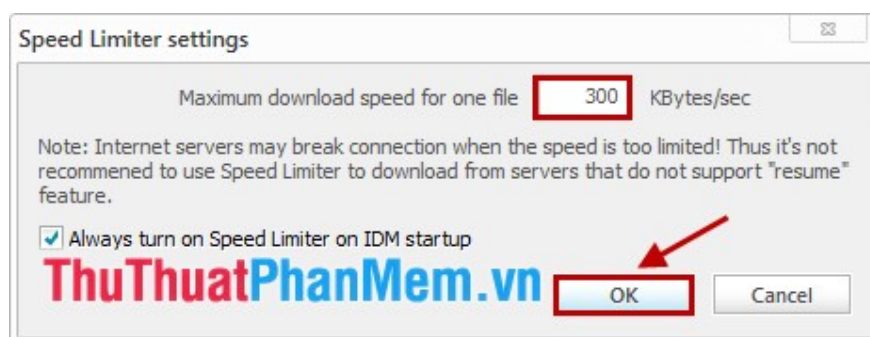

Step 1: By default, Internet Download Manager will start up with the system, double click on the IDM icon under the system tray to open the main IDM interface.

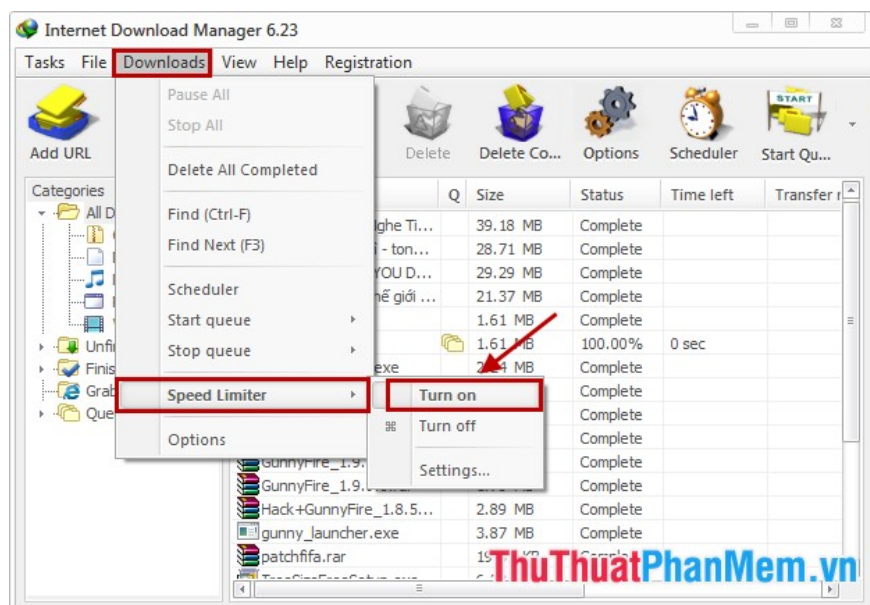

Step 2: On the Internet Download Manager interface, select the **Downloads** tab -> **Speed ??Limiter** -> **Settings** to set the download speed limit.

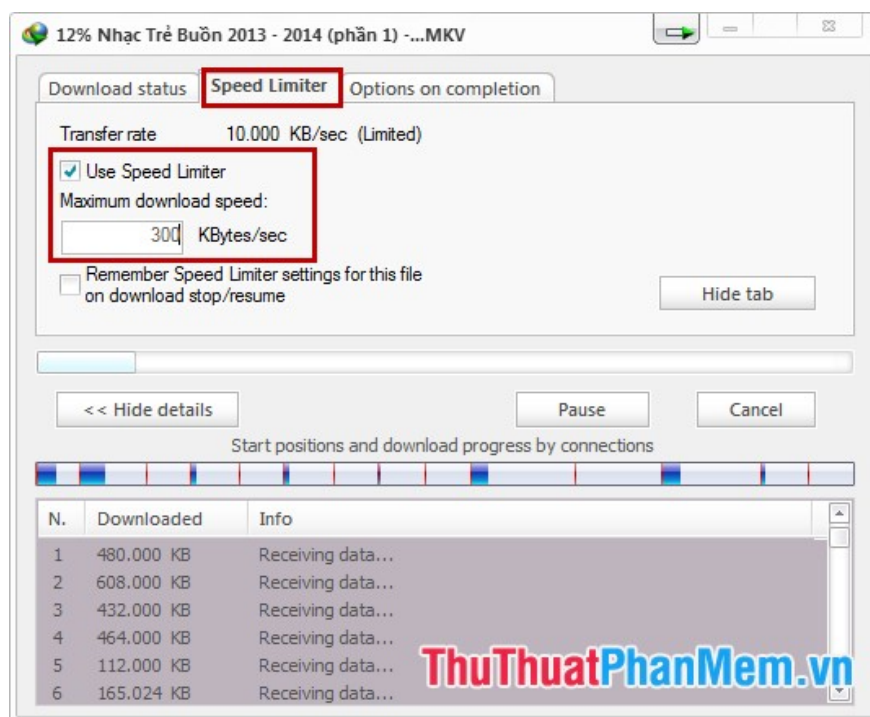

The **Speed ??Limiter settings** dialog box appears, enter the download speed limit in the box next to the KBytes / sec unit and then click **OK** to save it.

Step 3: After limiting the download speed, select **Downloads** -> **Speed ??Limiter** -> **Turn on** to activate the download speed limit by IDM.

Also if you are downloading a file but want to limit the speed directly to the file you are downloading, select the **Speed Limiter** tab and then click **Use Speed Limiter** and enter the download speed limit in the **Maximum download speed box**.

The above article has shown you how to limit the download speed by Internet Download Manager. This will help you to divide your network bandwidth more reasonably, you can both download and access the internet to do other things without fear of lag or shock because you are downloading files with IDM. Good luck!
