

Line breaks in Excel

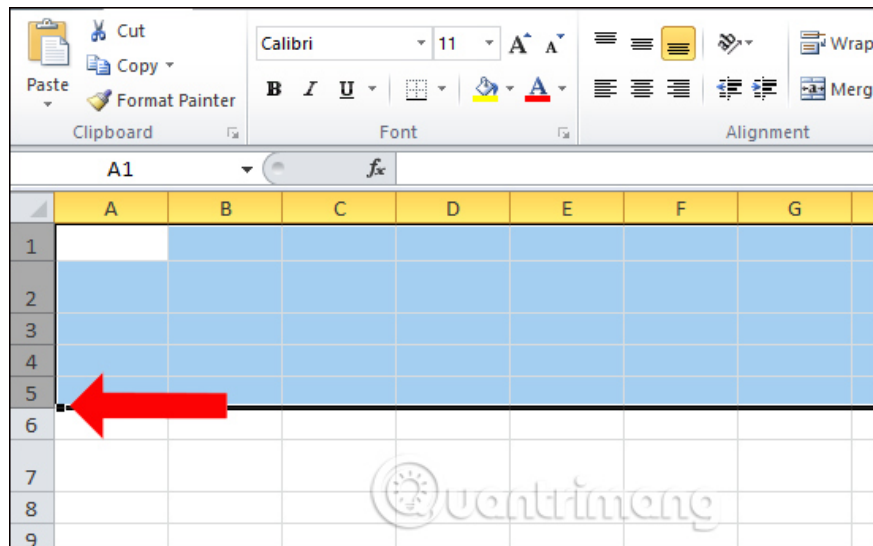

When you adjust the line stretching on Excel will help make the page layout more reasonable, look more professional.

Many people when entering new content on Excel or editing Excel spreadsheets will encounter small, inaccurate lines. The lines are not evenly spaced across the entire page content, making the page look relatively messy. Editing regular lines in Excel is essential to help you get a nice, easy-to-use spreadsheet that works professionally with office tools. The following article will help you know how to stretch lines on Excel.

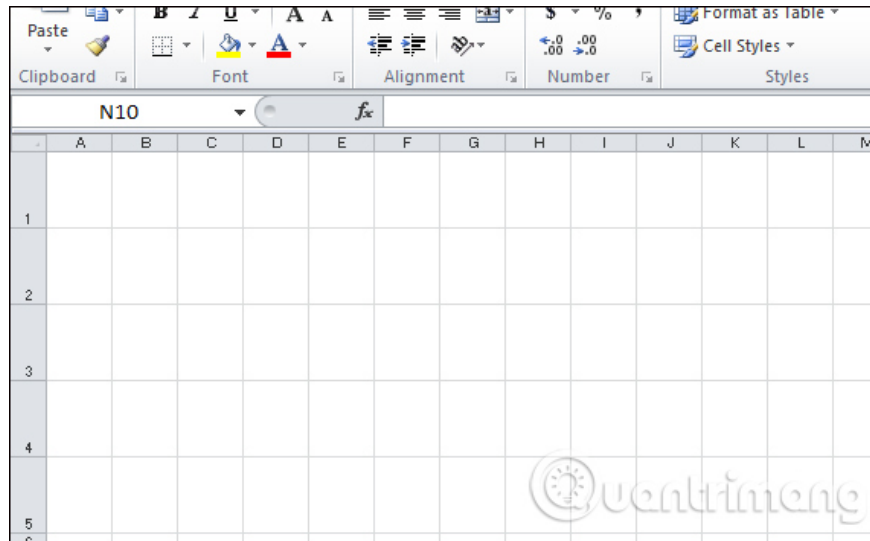

1. Guidance on how to align Excel correctly
2. How to align text in a cell in Excel
3. 3 ways down the line in Excel

Method 1: Manually stretch Excel lines

First, black out the lines you want to stretch by clicking the line number, then see the 4-dimensional arrow icon. Now move your mouse over the line number and stretch it in one position.

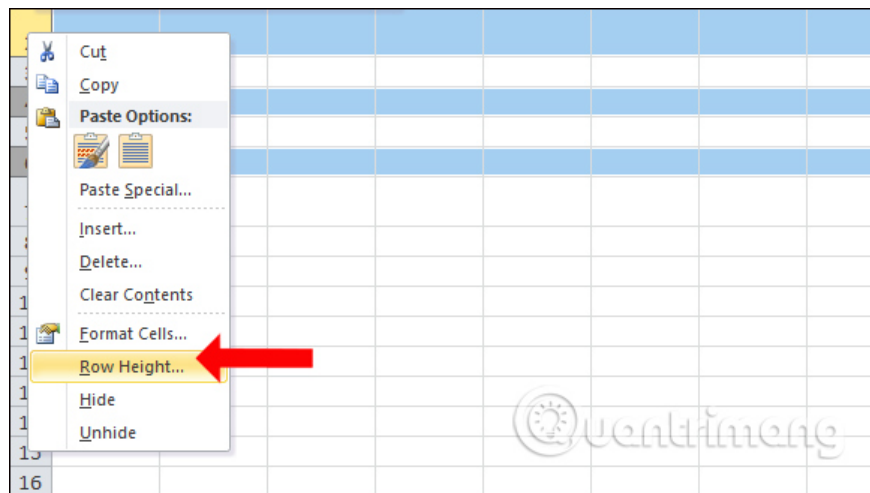

As a result we will get the stretch lines as shown below.

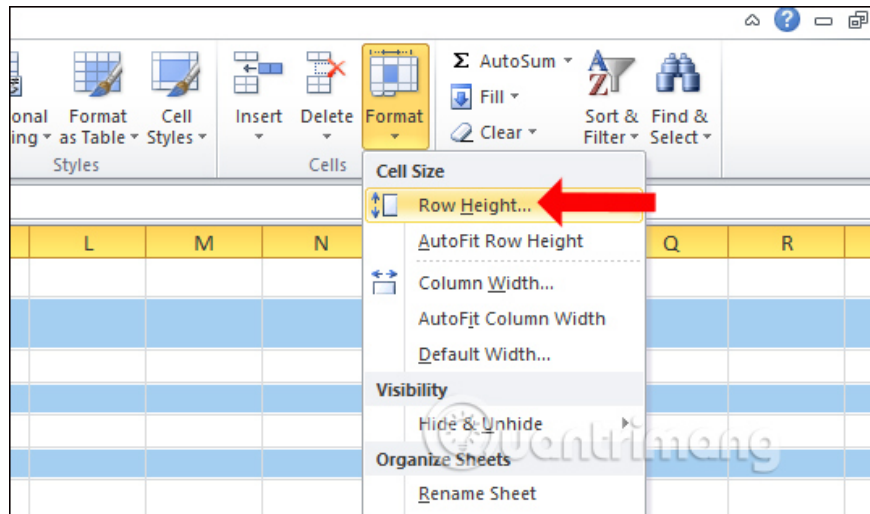

Method 2: Stretch Excel line by size

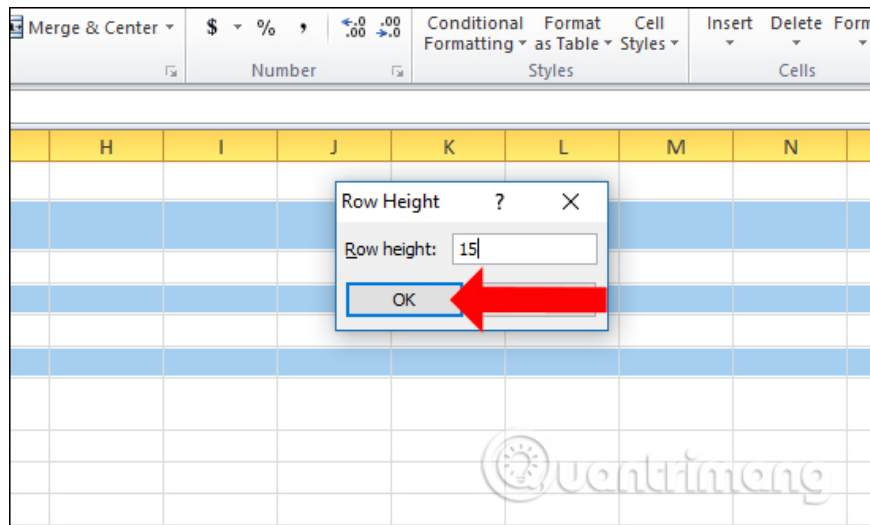

We also select the lines we want to expand, then right-click and choose **Row Height** .

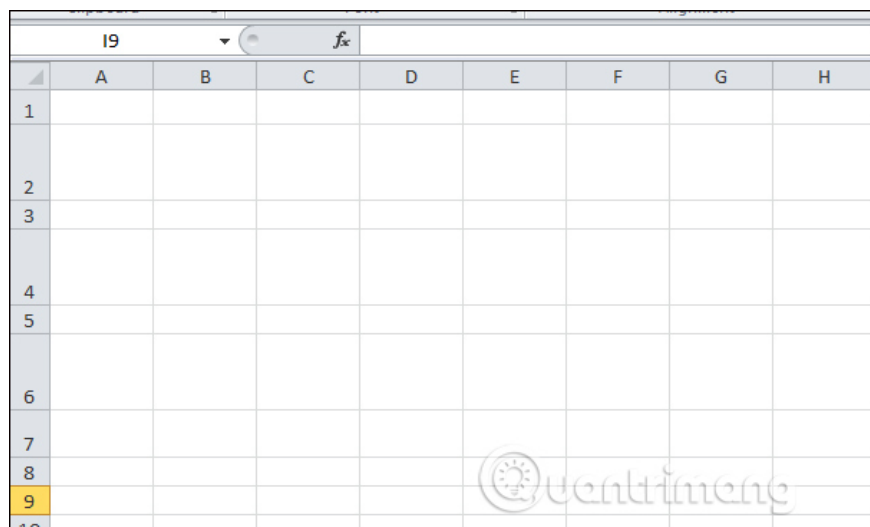

Or you can click on the Home tab and choose Format, then click on the Row Height.

Appears the Row Height dialog box to allow the user to **enter a dimension to expand the line** and click OK.

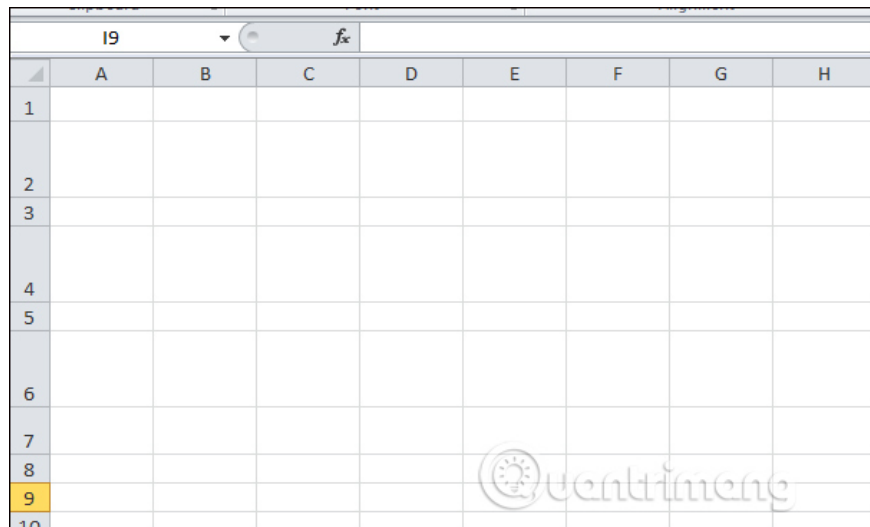

The result also has stretched lines according to the size you entered.

Method 3: Extend Excel automatically

We also highlight the lines you want to stretch and click on the Home tab, select Format and then click **AutoFit Row Height** . At that time, the system will automatically adjust line spacing without users having to edit much.

In Excel also has automatic line relaxation mode, suitable for the size and layout of content in each line. If you want to manually adjust line spacing on Excel, we can also enter the line spacing size in Excel.
