What is Microsoft Teams?

Microsoft Teams is a communication application that creates an ecosystem for meeting and exchanging information in the enterprise. This Microsoft tool for small and large businesses allows companies to conduct online meetings with all the features needed to create a productive environment. Microsoft Teams can be accessed for free with a personal account or through a paid subscription in Microsoft Office 365 Business.

How to use Microsoft Teams

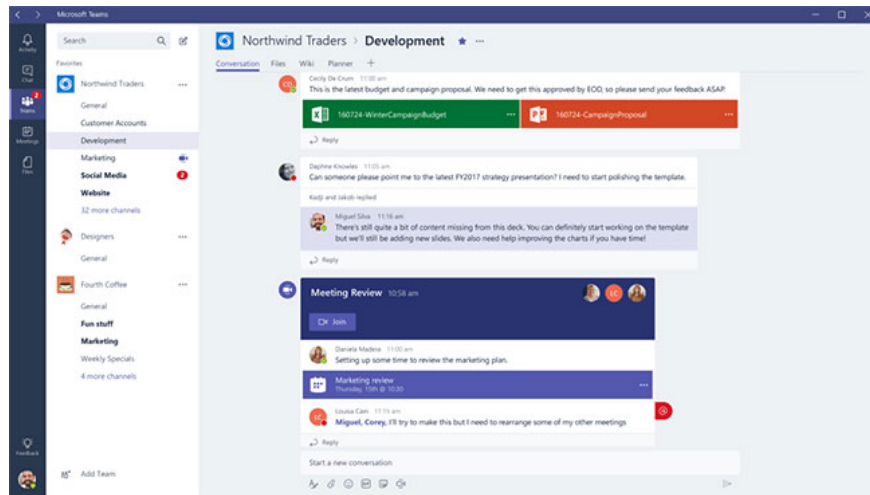

A person needs an online Microsoft account to sign in to the Teams work environment. Using the software, one person can organize meetings with up to 300 people or invite 299 more participants. Some of the key features include text-based messaging, file sharing, online meeting, 2GB cloud storage and 10GB storage for group sharing.

Several other Microsoft applications are integrated into Teams, and it is rapidly becoming a platform that supports online collaboration, meetings, and even online learning in schools. Integration with Microsoft Office enables a seamless work environment for productive meetings and work, with real-time on-screen feedback and sharing. One can make direct calls, as well as group calls.

You can use Microsoft Teams on your computer, on your phone, or through the web app. Refer to our detailed instructions to learn how to use the app on different devices:

1. How to use Microsoft Teams online
2. Instructions for using Microsoft Teams on your phone
3. Instructions for using Microsoft Teams on a computer

Notable features of Microsoft Teams

Making business calls and video conferencing easy is one of the most important features of Microsoft Teams. Scheduling meetings, inviting attendees, sharing files and data, conducting group meetings and chatting with individuals or groups are made simple. Unlike many other video calling apps, with MS Teams, you can also send voice messages or voicemail in case there is no answer in the call.

Seamless integration with Microsoft Office is also a big plus for Microsoft Teams, as workflows can be closed through real-time collaboration on the apps themselves. The app is highly customizable and allows users to integrate a number of social networking applications and programs, making it easy to access various functions from a single application.

Microsoft Teams acts as a work environment - almost like a physical office - where everything is available for high efficiency. Users can also use screen sharing to interact in real time and simulate an offline work environment.

MS Teams interface has 3 default tabs for all channels: Conversation, Files and Wiki. You can also add more tabs, including Excel, OneNote, PDF, Youtube, Trello, etc. These tabs are meant to improve productivity, but the more tabs you have, the more navigating through the channel interface becomes bulky. However, this is a great feature to have, unlike other online meeting programs.

Where can Microsoft Teams run into problems?

Like many other Microsoft products, including Microsoft Office, MS Teams interface and navigation are a bit cumbersome. Users need to go through multiple layers to get to the desired file or stored information. This is not an intuitive interface for easy navigation and searching, but it is a must to get used to if you want to use this tool.

Microsoft Teams only allows users to connect to Microsoft accounts, which is not the case with some competitors like Zoom. Therefore, there is an additional barrier to entry, making people wary when using the software. This also makes it difficult to hold meetings with external clients, as there are so many requests to enter and the registration process itself is not that easy.

More advanced features like scheduled calls, unique in-app integrations with MS Office apps, and comprehensive security features are all missing from the free version of Microsoft Teams. Microsoft Teams needs you to create separate groups - and while there's no limit to the number of groups you can create, this is an added layer that many can be difficult to navigate through.

What premium plans are available?

Basic MS Teams is free and users only need to sign in with a Microsoft or Outlook account. You can then conduct meetings for up to 300 people (most people don't have larger requests). Other plans include Office 365 Business Essentials, Office Business Premium, and Office 365 E3 (business), annual plans offer advanced features like better integration, call schedule, more storage, and more. recording utility, etc.

What are the alternatives to MS Teams?

Microsoft Teams has several direct competitors such as Slack, Zoom, Skype, Webex, Sharepoint, Google Classroom, etc. Zoom and Microsoft Teams compete as online meeting tools, with more and more people doing telework relies on these programs for meeting and collaboration. Zoom does a better job in scheduling meetings and doesn't require outside users to have the specific Zoom account they need to log in to. So meetings with clients are easy through the click of a link and launching the browser app for Zoom.

Meanwhile, Teams excels with its ability to integrate other applications and functions, so it's not just an online meeting application but also a complete work environment.

Compared to Google Classroom, Microsoft Teams mostly loses in terms of accessibility - as Google is very well integrated into most Android or desktop computers, and the chances of people using Google as their primary email account are also higher. compared to Microsoft. On MS Teams, it's easy to swap between teams and collaborate using in-app integration, something the Google Classroom lacks. However, in terms of interface and navigation, Google Classroom has an edge over MS Teams.

Other competitors like Slack, Skype (also a Microsoft product) and Webex have comparable features to MS Teams, but the obvious and powerful functionality of MS Teams when meeting online makes it win first. other competitors.

Conclude

MS Teams is truly a modern online collaboration platform that makes it easy to work remotely while still being productive. The program provides a complete work environment conducive to real-time collaboration, integrating other applications for greater efficiency and greater productivity when working with other team members. While the navigation seems heavy and cumbersome, with some layers needed to achieve the desired designation, Microsoft Teams is still one of the best programs for remote work.

Advantages

1. Excellent video quality
2. Create a complete online work environment
3. Integration with other applications

Defect

1. Outdated user interface
2. Microsoft account required to sign in
