

Link this website to friends, you will know their address via the computer's IP

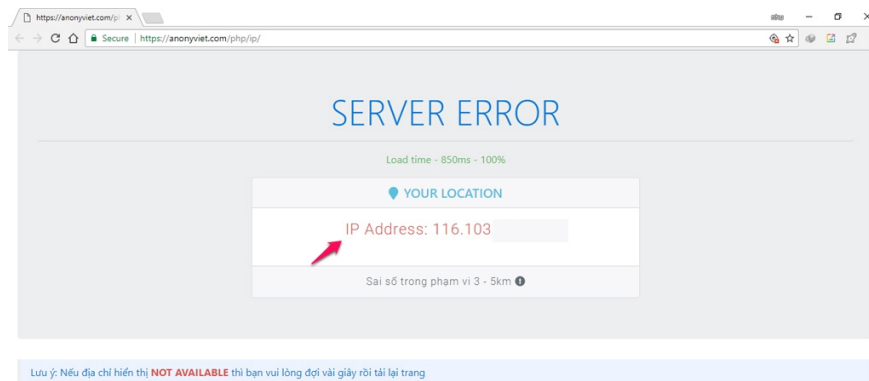

This is a tool that allows you to track someone else's IP address over the Internet, even if the person's live address allows them.

This is a tool that allows you to track someone else's IP address over the Internet, even if the person's live address allows them.

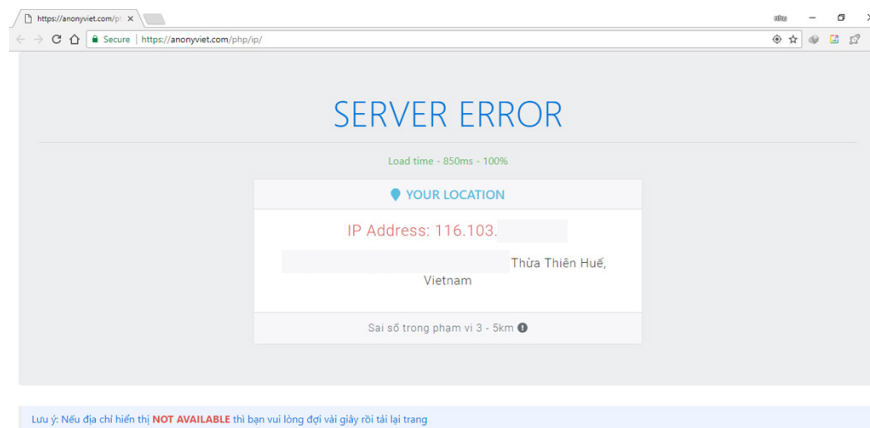

Instructions for finding addresses via IP:

First, send the website address below to your friends, it will indicate the public IP address on their device.

<https://anonyviet.com/php/ip/>

After accessing, a notification asking for access to the address will appear. If that person allows, the tool will display the device's location on their browser.

To know the location of your friends, visit <https://anonyviet.com/php/ip/log.txt>, you will know some information such as:

1. Access time
2. Browser name
3. IP address
4. Living area information

Note:

1. You should only use this tool for good purposes.
2. If you receive this link from anyone, whether it is a friend or relative, please ask carefully, absolutely do not click on 'Allow' as the address can lead to unpredictable consequences.
