

List of strongest guns Call of Duty Warzone Battle Royale mode

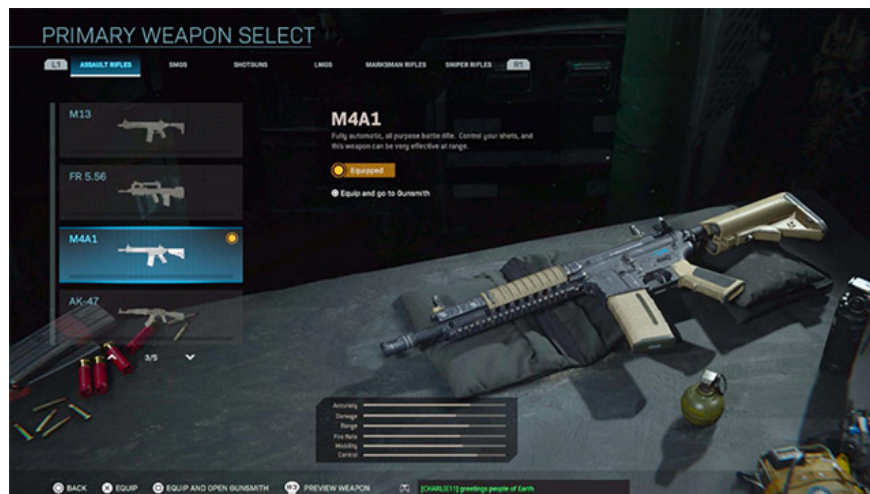

These are the most powerful and appropriate weapons in the Battle of Duty Warzone Call of Duty Warzone.

Call of Duty Warzone has been launched today and gamers are rushing to download and many people also do not want to download because they are afraid of configuring COD Warzone a bit too heavy compared to their computer configuration.

But don't worry, you only need to set the graphics to Low Settings. One thing that many gamers are interested in when entering the game is how the weapons in COD Warzone change compared to the Multiplayer mode of COD MW. Here are the most powerful weapons in Call of Duty Warzone Battle Royale mode.

COD Warzone Battle Royale most powerful weapon

1. Assault Rifle (Assault Rifle)

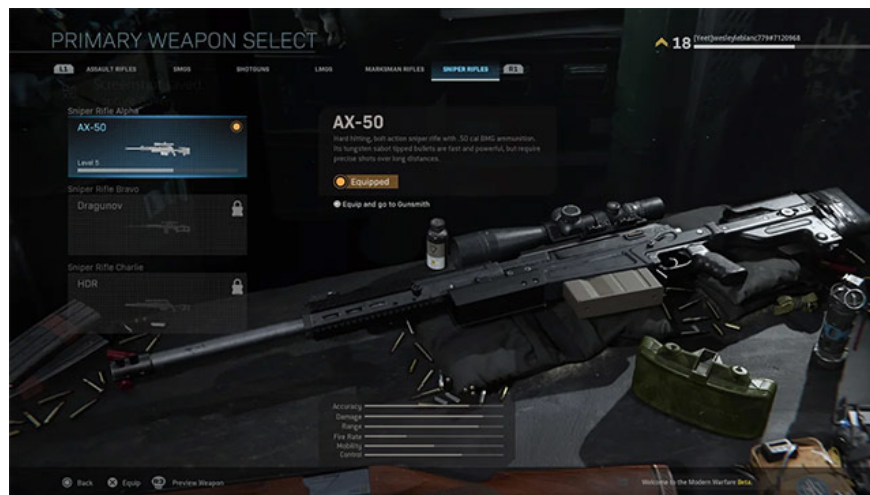

M4A1 is still the best AR gun in Battle Royale COD Warzone mode, despite eating a lot of nerfs. Short-range or long-range is not important for this rifle, you only need to use the Corvus barrel for M4A1 for maximum effective range.

Indeed, M4A1 is very flexible and can take down opponents quickly. Just add a sighting accessory like Viper Reflex Sight. Or more portable you can use 4X Hybrid, both medium and medium range play.

2. Sniper (Sniper Gun)

Right now, the AX-50 is the best sniper in the COD Warzone. Has the best operating range and has better ADS than HDR. Recently, there are more headshots in Warzone than in COD Multiplayer.

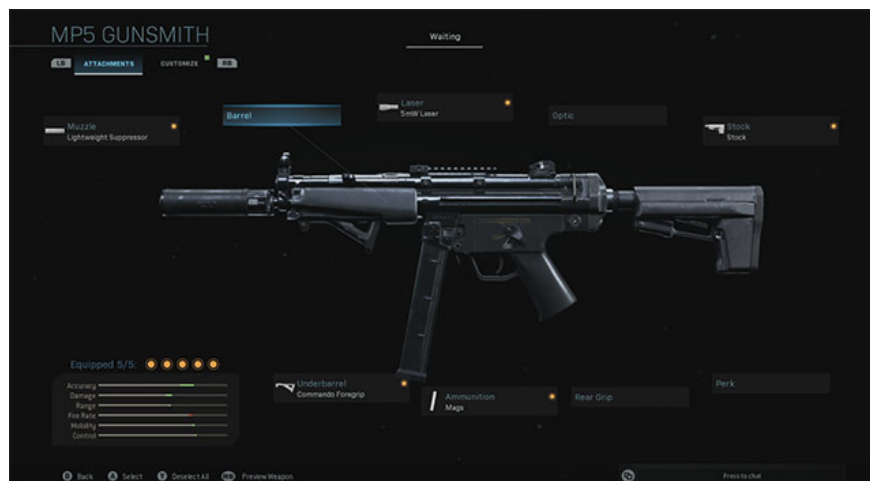

Just need a headshot to make sure the enemy you aim to will be defeated. But the important thing is if you are far away, you need to align so that the bullets hit the enemy, especially at a great distance.

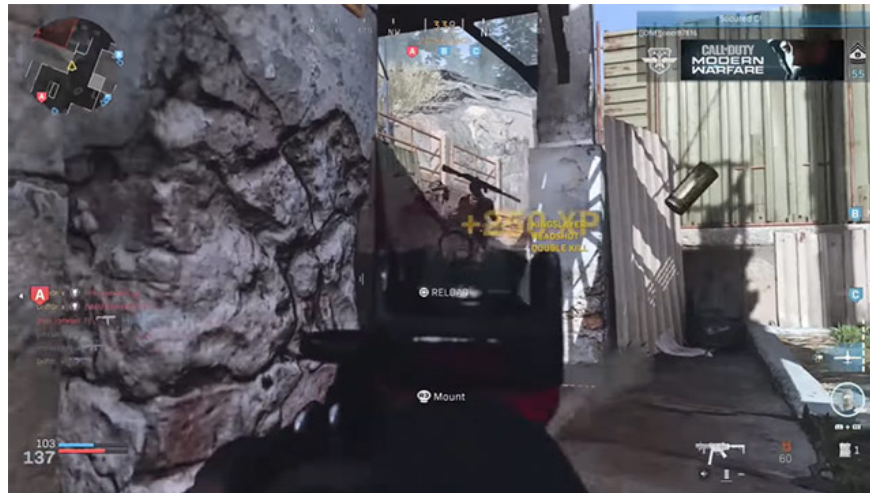

Another noteworthy option is that Dragunov, Dragunov in Multiplayer may not be noticed but with Warzone. This will be a best sniper rifle option because of the semi-automatic mechanism it has.

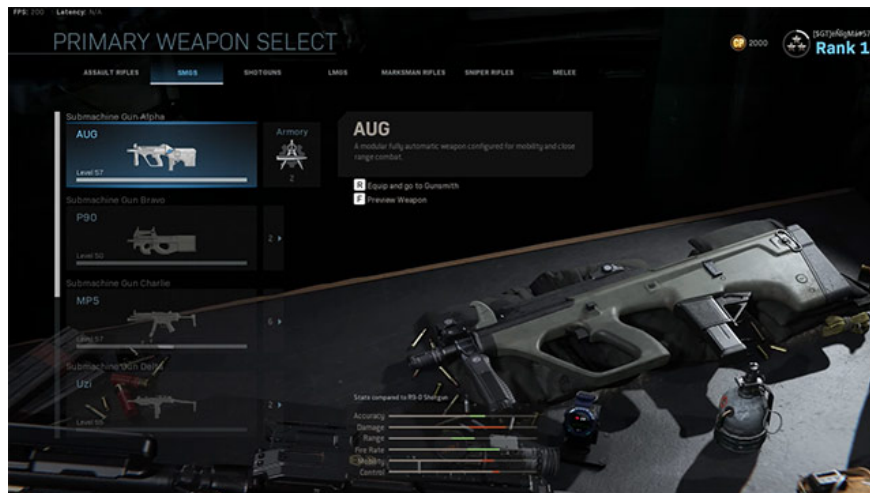

3. Sub Machine Gun

SMG is used a lot in Multiplayer but it is on small maps. Infinity Ward has buffed them in Multiplayer but is still not good enough to bring into Battle Royale. If you want an SMG to work farther afield, the MP5 is the best.

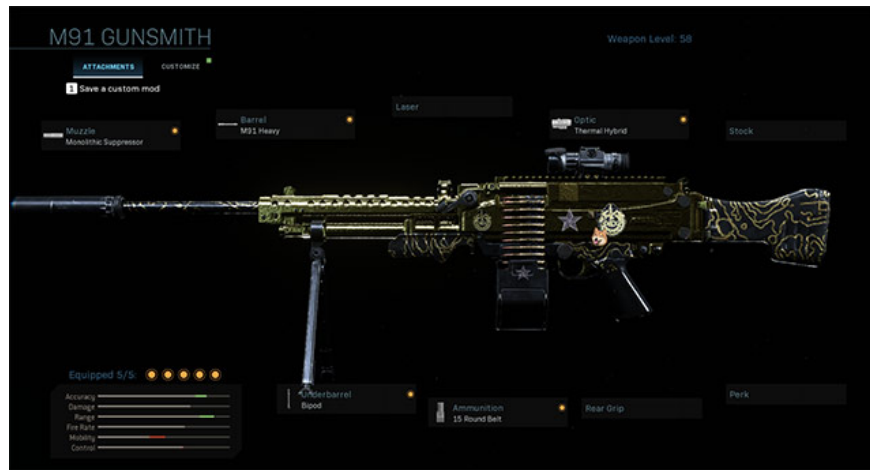

There are some SMGs that have a longer range, but the MP5 is still a priority on this list because of certain advantages. It had low recoil and was easy to control, but SMG was not designed for far-flung battles so AR would be a more appropriate weapon at that time.

AUG is also another option for long distance meetings. The 5.56mm ammo variant helps kill opponents at a longer distance but has a smaller magazine size.

4. Light Machine Gun (Light Machine Gun)

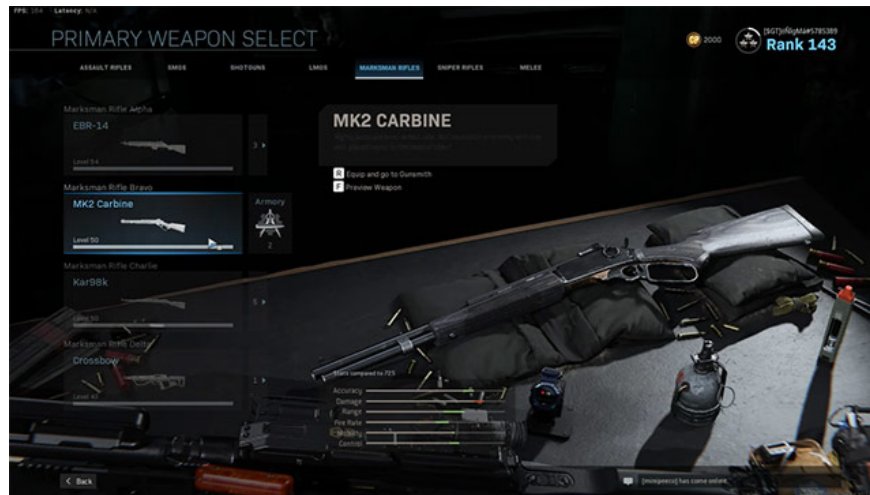

LMG is rarely seen but it will still be widely used in COD Warzone. The two strong candidates for LMG are PMK and M-91 in Battle Royale and the biggest problem is still ineffective ADS.

But the number of bullets and range will be a plus for that disadvantage. However, they will still make you slow down significantly because the weight of these LMGs is quite heavy.

5. Marksman Rifle (Marksmanship rifle)

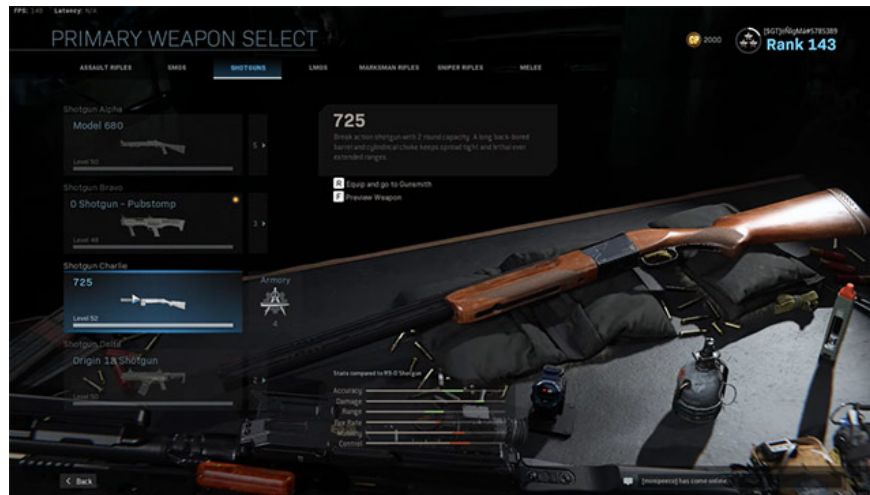

Definitely one of the most powerful weapons in the game besides sniper rifles. Marksmanship rifles are very strong even in Multiplayer mode, their ADS aiming speed is much faster than sniper rifles.

The MK2 and Kar98K are the best MRs in the current COD Warzone Battle Royale. In addition, EBR is also a good choice with a semi-automatic mechanism and is easy to headshot enemies.

6. Shotgun

Hunting rifles are not very prominent in both Multiplayer and BR, but if close combat is close, be careful with these guns because they can destroy enemies with a single shot.

The strongest shotgun in Warzone will be different from Multiplayer. In the Multiplayer, the 725 is best, but the R9-0 will be a shotgun that is more suitable for Battle Royale mode.
