

## LTE LTE Pixel Edition began to be delivered

From April 13, users who ordered the Chromebook Pixel LTE product on Google Play will start receiving the device from Google.

**From April 13, users who ordered the Chromebook Pixel LTE product on Google Play will start receiving the device from Google.**

According to *Cnet*, the **Chromebook Pixel** is Google's first laptop to use Chrome OS with a touch screen.

This model was announced by Google in late February. However, at that time, the device only had Wi-Fi support version, while the version supporting 4G LTE connection, users had to order.

Chromebook Pixel has the advantage of using high resolution screen - (*Photo: Google*)

The device uses a 12.85-inch touch screen, equipped with Gorilla Glass protective glass, which achieves a resolution of 2,560x1,700 pixels (about 4.3 million pixels, a density of 239 ppi), which is higher than the screen resolution of 2,560x1,600 pixels on Apple's MacBook Pro 13 inch Retina.

In terms of configuration, the machine uses Intel Core i5 processor to reach 1.8 GHz, integrated HD4000 graphics card, 4G RAM and equipped with 32 GB SSD drive (with 64 GB option) and added with 1 TB free for 3 years on Google Drive.

In addition, the device is also equipped with two USB 2.0 ports, webcam, 3.5mm headphone jack, SD card slot, Mini DisplayPort and battery life is 5 hours continuously.

The Chromebook Pixel costs \$ 1,299 for a Wi-Fi-only version. Particularly, support for 4G LTE connection is sold for USD 1,449.
