

Mac OS vs Windows: Which Operating System Should I Choose to Study at University?

Students today rarely carry notebooks or pads as these items are too retro. In lieu of these, they carry their laptop - an indispensable item for studying. A quality laptop offers fast responses and handles any kind of applications to help you with your schoolwork.

If you want to make the most of your laptop, you will need the best operating system (OS). Choosing which OS is the best is a complex task and your choice will depend on your needs.

All about Mac OS

If you plan on buying a Macbook Air, the operating system you will use would be macOS as with all other Apple laptops and devices. Apple users see this OS as a major advantage because it's easy to work with.

Even first-timers who use this OS, can set up and navigate things easily. It's an intuitive system that even neophyte users can handle easily. Right now, there are hundreds of thousands of third-party software and apps available for use with the macOS.

If you have shifted from Windows for the first time, you won't feel like you're missing out on anything. But if you also use your laptop for games, you might want to reconsider using macOS because many games aren't compatible with this OS.

Windows OS

Microsoft's Windows is the most popular OS in the world with a really high percentage of laptops and computers having this OS installed on them. Because of the wide range of software programs and hardware options it supports along with the wide selection of devices you can install Windows on, this OS has gained a lot of followers.

Even if you already own a device you're comfortable with, you can still buy Windows on its own, then install it into your device. Windows 10 offers a lot of advantages. Microsoft Office is one of the best apps that you can use to do a wide range of jobs - and it comes preinstalled in Windows 10. You can find this using the file explorer.

Windows also happens to have the biggest largest library in the world, which means that you can gain access to a large variety of software choices. The number of available apps for windows is continuously increasing. Now,

Windows also supports iTunes, Netflix, and more.

Essay writing service for students

Whether you plan to use a Mac OS or a Windows OS, you will need a quality laptop to use for your writing homework and other types of coursework. As a student in college, I had the opportunity to improve my coursework through a coursework helper.

You can also get coursework assistance from Uk.EduBirdie. This is a reputable writing service trusted by students of different levels. With your coursework out of the way, you will also have time to focus on your studies.

User interface features

As a student, you always need your laptops - almost every day. This is one reason why your OS interface is very important. For Windows, the features you can look forward to include:

1. A traditional interface with a new tile-based style.
2. You can resize the Start Menu to your preference.
3. You can organize all of your files in the Start Menu along with graphics to can help you find your files faster.

For the Mac OS, the features you can look forward to include:

1. As a macOS user, navigating the latest version won't be a problem since Apple hasn't made any big changes to its operating system for years now.
2. You can also customize the macOS taskbar and place your most-used or favorite apps and programs where you can access them right away.

A reliable internet connection is essential too

While it's true that writing papers on your laptop makes editing a lot easier, you also have the Internet at your disposal. When you're online, you can check sources immediately, find inspiration whenever you're stuck, or detect plagiarism on your paper using free plagiarism checkers.

This means that you will need a good internet connection to make these things happen. If you have a good connection, your laptop will allow you to work quickly, independently, and comfortably so that you will always stay on top of your game.

Conclusion

There isn't a clear winner in this computer contest. Each of these giant companies has created amazing products for their operating systems. To choose the best one, there are many factors to consider. Your choice should depend on which OS will best fit your needs and your personality.
