

Mac Pro 2019: Apple has just made the whole world 'Shocked' with the unbelievable price of the highest version of Mac Pro 2019

Mac Pro 2019 is an interesting product, interesting in all aspects, especially at price.

After the spectacular launch of the flagship Mac Pro PC on the WWDC 2019 stage in early June, Apple promised to officially launch this high-end product in the shopping season later this year, and Apple Defects kept his promise. The Mac Pro has been available online since December 11, but it still doesn't seem to have created the craze that Apple expected, so what's the reason?

First of all, I must confirm that the Mac Pro 2019 is an interesting product, interesting in all aspects, from design style, to configuration power and especially at the price. The Mac Pro 2019 starts at \$ 5,999, but if you buy the Pro Display XDR monitor (\$ 4,999 and a Pro Stand \$ 999), along with the most 'full optional' package, the total The amount of money you have to spend for this machine can reach \$ 53,000 (approximately 1.22 billion) - an unbelievable number, more expensive than the newly launched Cybertruck of Elon Musk.

One of the great things that Mac Pro 2019 owns is the ability to customize the configuration on a relatively flexible basis with a list of options available at each price. Assuming they can afford to pick up the most 'expensive' components, these equipment will be:

1. Intel Xeon W 2.5GHz 28 core processor with Turbo Boost up to 4.4GHz
2. 1.54 DDR4 ECC RAM memory (12x128GB)
3. Dual Radeon Pro Vega II Duo GPUs with 2x32GB HBM2 RAM per channel

4. 1 4TB SSD storage drive
5. The bundled software packages include Final Cut Pro X, Logic Pro X and Apple Afterburner decoder card accessories, Magic Mouse 2 mouse and trackpad, Magic Trackpad 2 .
6. Seamless base with moving wheels

In total, you'll have to spend at least \$ 52,599 to own this interesting 'technology toy'. Another reason Mac Pro is being 'priced' is because this product will be manufactured and assembled in the US instead of China like most other Apple products.

We all understand that Mac Pro is a computer model for professionals who use it to "make a living". But even for the most professional, spending nearly \$ 53,000 on a set of desktop computers seems a bit 'crazy'. Perhaps the conclusion of this story should be ceded to the rich iFan. Anyway, each person will have his or her own way of spending, in accordance with their abilities!
