

# MacBook laptop will also use Retina monitor?

After Apple released the latest version of OS X Lion operating system OS X 10.7.4, the page Apple Insider discovered the intention to equip a high-resolution Retina display for MacBook laptops.

**After Apple released the latest version of OS X Lion operating system OS X 10.7.4, the page Apple Insider discovered the intention to equip a high-resolution Retina display for MacBook laptops.**

Accordingly, in addition to bug fixes and security upgrades, OS X 10.7.4 also updates some applications, with icons that double the resolution, from 512 x 512 pixels to 1,024 x 1,024 pixels .

This change can be noticed through applications like TextEdit built into OS X Lion.

According to Apple Insider, redesigning the icon with a resolution twice as high as before is a sign that Apple is planning to unveil a new MacBook with a Retina super-sharp screen, which is already equipped. on iPhone and iPad.

Previously, information experts had revealed that the 'Apple' will 'Retina' the MacBook in order to make a difference for their notebook products, in the context of many other PC companies are actively developing these. New ultrabook and notebook models.

According to the information shared earlier, the time when MacBook 'Retina' appeared will coincide with the release date of OS X 10.8 operating system, which is about this summer.
