

MacroDroid - Android Task Automation App

MacroDroid is a simple automation app to automate tasks on Android.

What is MacroDroid?

MacroDroid is a simple automation app to automate tasks on Android. While Android has a lot of automation apps, MacroDroid is the easiest and simplest of them all.

You can automate your daily workflow with this simple solution, thereby optimizing your daily life. For example, you can start playing music when you enter the house or switch to mobile data when you leave the office.

Features of MacroDroid

Automation has never been easier

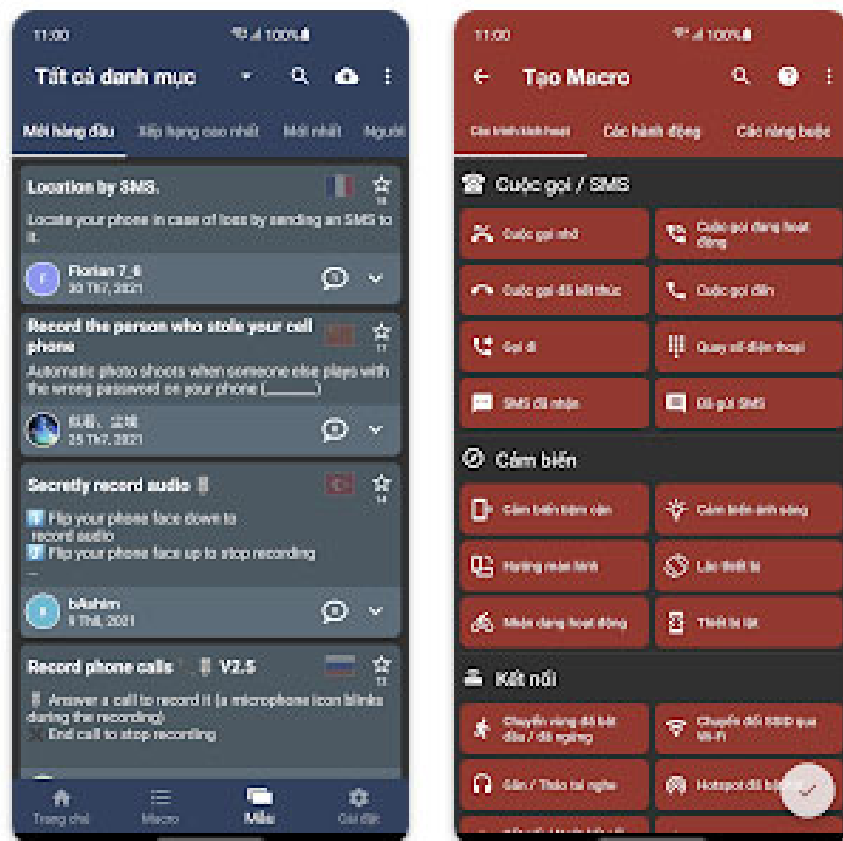

To create a macro, simply select a trigger, select an action, and add optional bindings.

1. **Trigger** : Choose the trigger that will make your macro run. There are over 85 options like date/time, incoming SMS message, and battery level.
2. **Actions** : Set one or more actions you want to perform in your macro. There are over 100 things you can do, some examples include sharing your location, sending an email, or reading some text aloud.

3. **Bindings** : Only want your macro to run when plugged in? No problem, just add a binding. There are over 50 options to choose from.

Great power, simple to use

1. **Edit** : Edit your macro in the easy-to-use editing screen. Add or remove features and configure the macro to meet your needs.
2. **Color coding** : Simple and effective color coding means you will never mix up your SMS trigger with your SMS sending action.
3. **Powerful Features** : Take advantage of powerful features like custom variables, timers, and basic control flow (If/Else, While/Do).
4. **Interoperable** : Fully compatible with Tasker and Locale plugins and interfaces with other apps that support standard Android shortcuts.
5. **Help is always available** : MacroDroid is designed with ease of use in mind. If you need a little extra help, just tap and hold on any action, trigger, or constraint for more details.

Keep things organized

1. **Categories** : Add your macros to one of the pre-made categories or create your own as desired. Color code macros and categories to make them visually identifiable.
2. **Favorites** : Mark macros as favorites and easily filter between just your favorite macros and your entire set.

3. **Control** : Enable/Disable individual macros or by category, so macros only work when you want them to.
4. **Description and search** : Add a description to your macro and use the search feature so you can always find the macro you want.
