

Macromedia Flash - City photo zoom effect

This tutorial will show you how to enlarge any image with some flash tips. In this example, we will use a city photo, but you can use these same effects for any image. This article is completely

This tutorial will show you how to enlarge any image with some flash tips. In this example, we will use a city photo, but you can use these same effects for any image. This article absolutely does not use scripting code in flash, but just do a few simple steps below

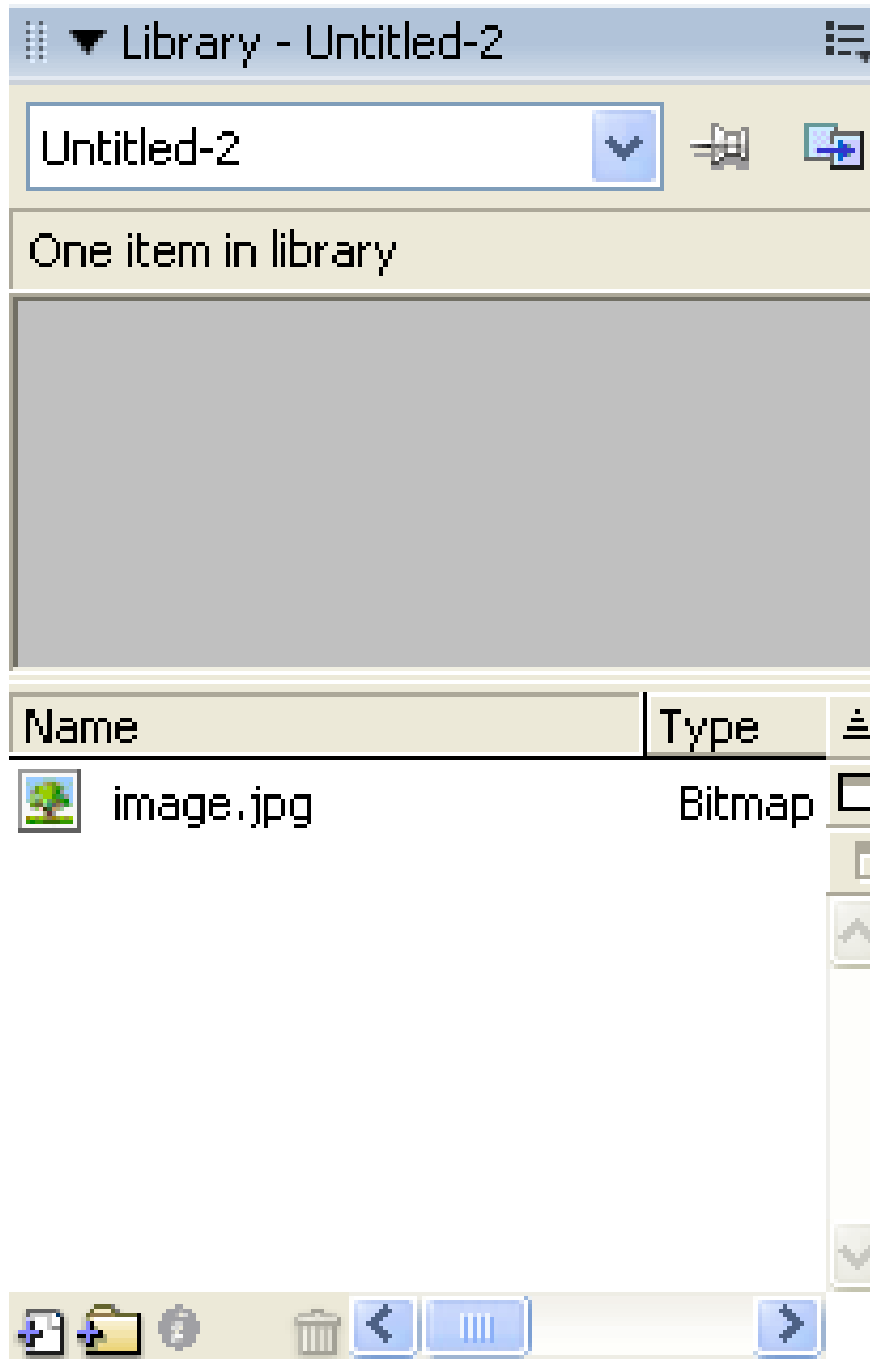

For example :

Step 1

First you can download my photo to use, and remember to put the file in place so you can easily find it.

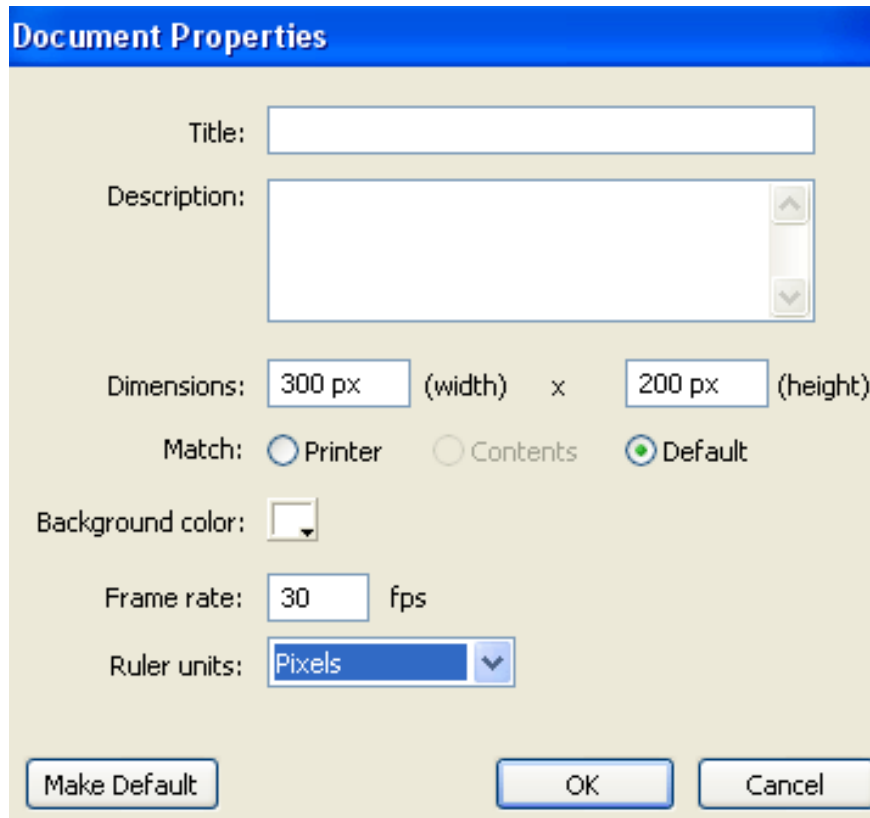

Step 2

Open the Flash program on your computer. Go to *File > Import > Import to Library* . In the file selection window that appears, locate the image you just downloaded, select it and then click *Open* . If you now open the flash library (*Ctrl + L*), you will see which image was taken (below).

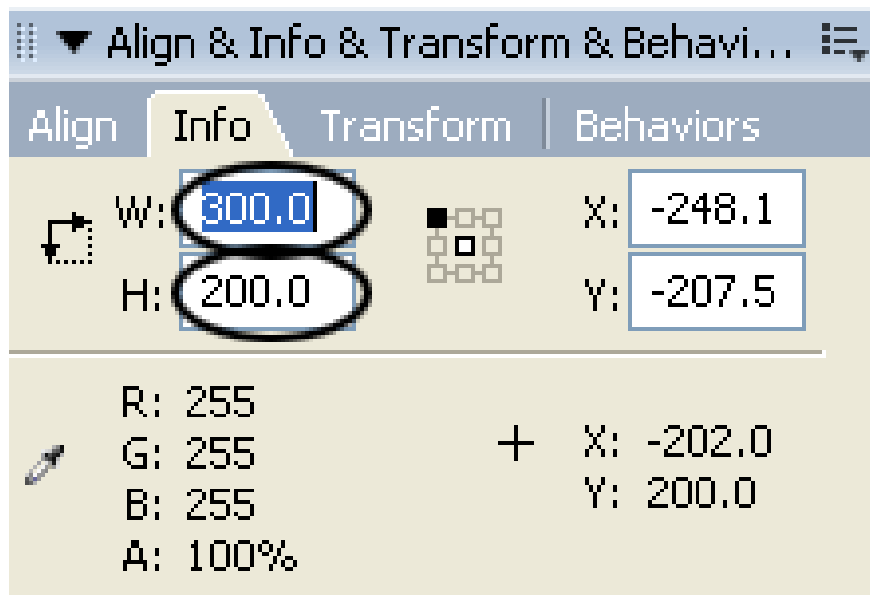

Step 3

Press *Ctrl + J* key on the keyboard to open *Document Properties* , and set the width of the file to 300 pixels, the height to 200 pixels. Choose any color as background color. Set your *Flash movie* 's *frame rate* to 30 and click *ok* .

Step 4

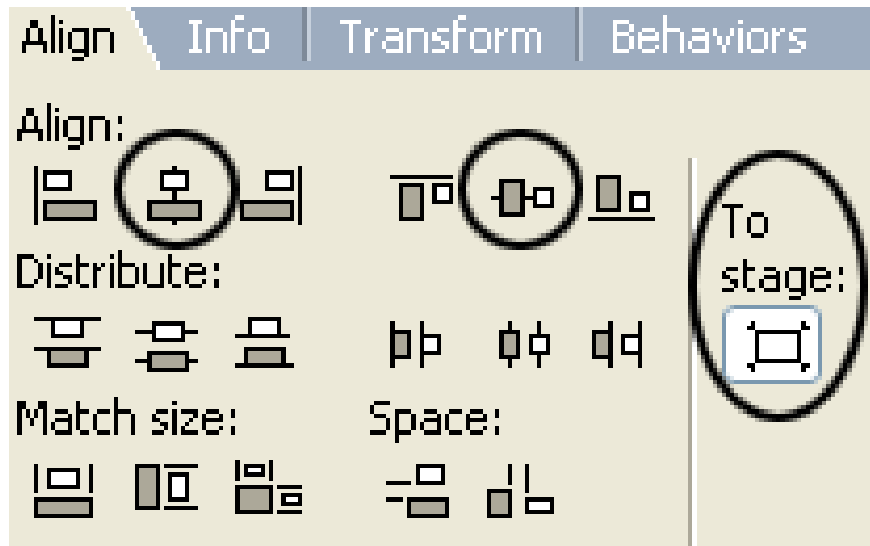

Pick the *Selection Tool* (V) and use the 'drag-and-drop' technique to bring the image from the flash library to the content. This image is bigger than the file and you can shrink it to 300x200px as the size of the background. You can drag the image with the *Free Transform Tool* (Q) or some *Info Panel* (Ctrl + I) and set W: 300, H: 200 as shown below.

Step 5

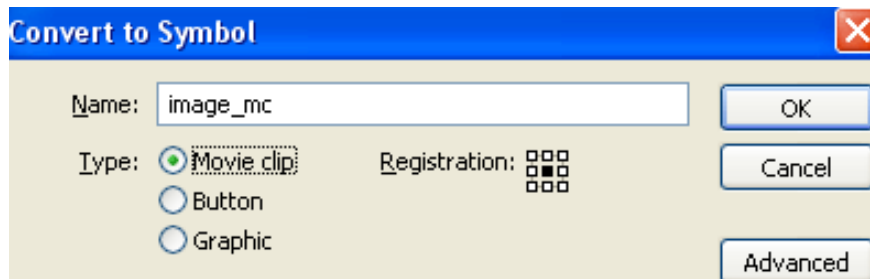

Select the image, go to the *Align Panel* (*Ctrl + K*) then set the following content:

1. Make sure the *To Stage* button in *Align / Distribute* is enabled.
2. Click on the horizontal center button at *Align*
3. Click the vertical center button at *Align*

Step 6

Select the image, press F8 key (*Convert to Symbol*) to convert the image into a Movie Clip Symbol.

Step 7

Select frame 40 and then frame 45, press F6 key

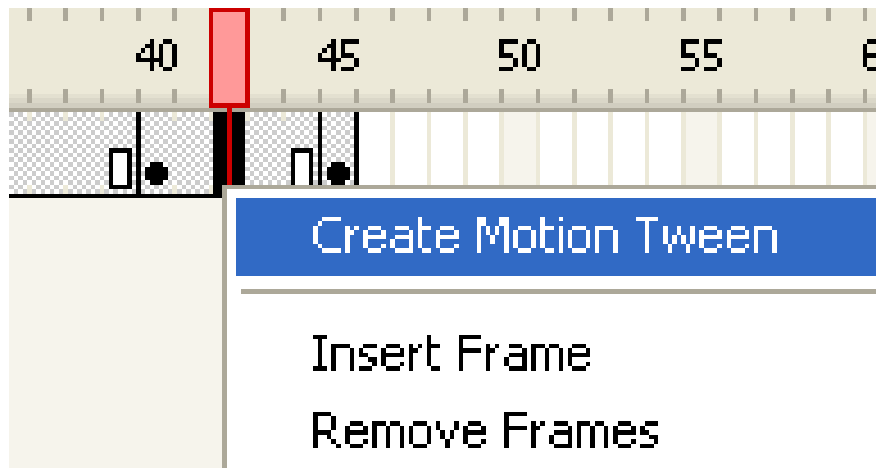

Step 8

While you're still on frame 45, take the *Free Transform Tool* (Q), press - hold down the *Shift* key and enlarge the image a little (as shown below).

Step 9

Right-click anywhere in the gray area between the two keyframes on the timeline and choose *Create Motion Tween* from the menu that appears.

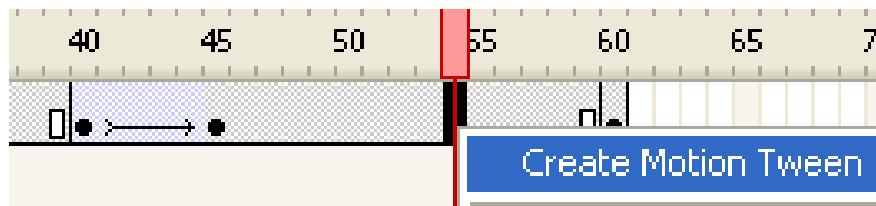

Step 10

Click on frame 60 and press F6 key. Then select the *Free Transform Tool* (Q) and enlarge the image again. Continue dragging the image a little left.

Step 11

Right-click anywhere on the gray area between frame 45 and frame 60 on the timeline and choose *Create Motion Tween* from the menu that appears.

Step 12

Click on frame 65 and press *F6* key. Then, enlarge the image again a bit.

Step 13

Right-click anywhere on the gray area between the frame 60 and frame 65 on the timeline, choose *Create Motion Tween* from the menu that appears.

Step 14

Click on frame 85 and press *F6* key. Then, enlarge the image again a bit.

Step 15

Right-click anywhere on the gray area between frame 65 and frame 85 on the timeline, choose *Create Motion Tween* from the menu that appears.

Step 16

Click on frame 100 and press *F6* key. Then, enlarge the image again a bit.

Step 17

Right-click anywhere on the gray area between the frame 85 and frame 100 on the timeline, choose *Create Motion Tween* from the menu that appears.

Step 18

Click on frame 125 and press *F7* (blank keyframe). Then go back to the first frame and press *Ctrl + C* key (Copy). Click again on frame 125 and press *Ctrl + Shift + V* key (Paste in Place).

Step 19

Right-click anywhere on the gray area between frame 100 and frame 125 on the timeline and choose *Create Motion Tween* from the menu that appears.

Check the product (*Ctrl + Enter*)
