

Marvelous revival life in the burning forests of Australia

Here are photos of the magical resurrection in burnt forests in Australia after the disaster. Burns from the fire can affect the growth of trees in the forest but from there everything will start again.

Over the past few months, more than 10.7 million hectares of forest land and meadows in Australia have been burned down during a prolonged wildfire. However, even on the ashes of these lands, life is miraculously reviving, showing us the extraordinaryness of Mother Nature.

Here are photos of the magical resurrection in burnt forests in Australia after the disaster. Burns from the fire can affect the growth of trees in the forest but from there everything will start again.

From the ashes in a forest in Australia, a green foliage is growing strongly.

On burnt dry stalks, green hues appear.

The magical and powerful flowering of beautiful sprouts gives hope for the revival of the forests of Australia.

The vitality of nature is extremely intense.

The trunks of trees thought to have withered from the wildfire are now covered with lush young shoots.

In the burnt forests of Australia, the young shoots are like the image of a phoenix, a legendary bird revived from deadly ashes.

The green of trees, the color of life.

The beauty and intense vitality of nature.

Experiencing fierce and devastating forest fires, this fern still rises strongly.

Weeds have always had incredible strength and endurance.

Strong young shoots are reviving and rising from the black trunk itself in the Australian forest.

1. The series of photos proving the world still has many strange things that we have never known
