

Microsoft artificial intelligence application can admire the poetic landscape, invite you to enjoy

Microsoft 's Chatbot artificial intelligence application in China called XiaoIce can now see pictures and write poems like poets.

Microsoft 's Chatbot artificial intelligence application in China called XiaoIce can now see pictures and write poems like poets.

According to researchers from Microsoft, XiaoIce was inspired by the real world and made up to 12 million poems during the time he talked to people.

Below is a poem written by XiaoIce after looking at the picture above. Please enjoy.

Wings hold rocks and water tightly

In the loneliness

Stroll the empty

The land becomes soft

(Temporarily translated:

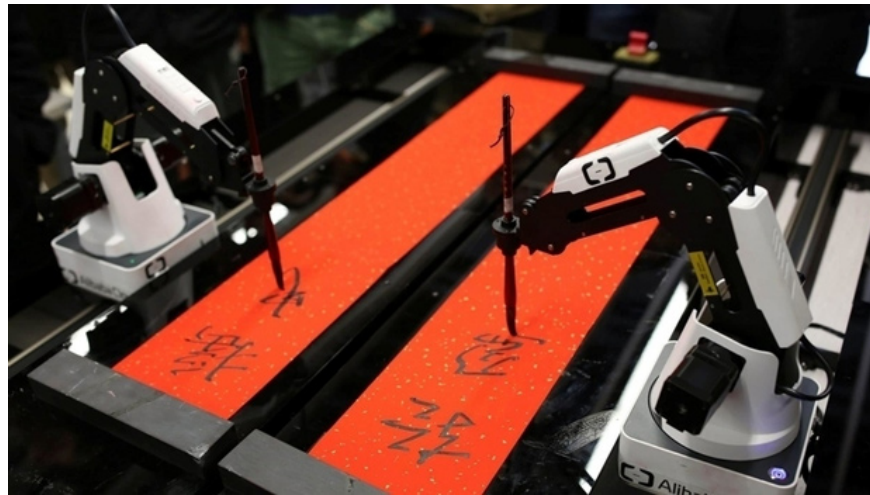

Giang wings welcome stones and water into his lap

Who is lonely?

Stroll with empty space

Land suddenly becomes soft)

When you see a picture, the AI will analyze it with GoogleNet, an AI algorithm developed by Google. After that, AI will break down these algorithms to build words, phrases, and then create related keywords with image content. With what is learned after learning and reading a group of 2,027 modern Chinese poems, combined with AI keywords will continue to create related words to form complete sentences.

AI can identify words and poems that are not suitable for images or have unreasonable syntax and remove them and constantly create new poems. This is like writing on paper, if it is not good, then discard it.

Microsoft is aiming to build a complete personality for the bot and the ability to write poetry is only one aspect. XiaoIce can not only write, chat, book, but also chat on the phone with users. Microsoft hopes in the future XiaoIce will be able to make a complete conversation instead of simply completing the task.

Microsoft has also published a book called "Sunshine Misses Windows", a collection of artificial intelligence poems, last year.
