

# Microsoft claims that deleting the data of Windows 10 October 2018 update will never happen again

Yesterday, Microsoft once again released the Windows 10 October 2018 update after fixing the data deletion error and the company also confirmed that the next updates will never encounter the same error.

The Windows 10 October 2018 update released by Microsoft in early October has encountered a serious error that caused the computer system to automatically delete user data. Microsoft had to "revoke" this version of Windows 10 to fix the error.

Yesterday, Microsoft once again released the Windows 10 October 2018 update after fixing the data deletion error and the company also confirmed that the next updates will never encounter the same error.

Michael Fortin, vice president in charge of Windows, said the company will try to discover the earliest errors through test systems and feedback from test users and partners.

The content development team in the company will be tasked with checking the basic features of the updates to be able to deliver high-quality test updates from the start.

In addition, receiving feedback from partners who are hardware manufacturers, who use Windows 10 software to install on their devices is still maintained by Microsoft.

In addition, Microsoft continues to maintain user feedback or bug reports in the Windows Insider program. These test updates have been tested in advance by the development team at Microsoft, so they will be more quality.

Microsoft will use an overview tool to monitor and evaluate user feedback in real time when releasing a Windows 10 update. This will help the company to handle it as quickly as possible if there is any. any error detected by the user.

Microsoft even uses machine learning to help evaluate exactly which devices are right to receive the earliest updates, which devices should be updated later. If an error is found, the update will stop issuing to fix the problem.

Thus, a new Windows 10 update will have a slower release process, and go hand in hand to each of the target groups one by one. This helps limit the number of affected customers and users in the world if any errors occur.

With this new release, Microsoft believes that in the future, Windows 10 updates will not encounter major problems, causing serious impact on users such as the deletion of user data in updates. Windows 10 October 2018 recently.
