

Microsoft claims Windows Defender is the best antivirus software

In the latest antivirus test, Windows Defender with performance improvements has impressed the global security vendors. And with what Windows Defender does, Microsoft has confidently declared its product to be the best antivirus software.

In the latest antivirus test, Windows Defender with performance improvements has impressed the global security vendors. And with what Windows Defender does, Microsoft has confidently declared its product to be the best antivirus software.

Brad Anderson - Vice President of Enterprise Security and Mobility said at least 18% of Windows 7 and Windows 8 devices currently installing Windows Defender are the default antivirus. This is really impressive because Windows 7 is not preloaded with any antivirus software, users decide their own security solutions and they have chosen Windows Defender and not any other third party antivirus program. .

With Windows 10, Windows Defender is preinstalled and there are currently more than 50% of Windows 10 devices that are still thought to be using this antivirus application.

Anderson confidently asserts that Windows Defender can protect you from the most dangerous threats.

Another strong point of Windows Defender is that when updating large operating systems, users absolutely do not need to worry about compatibility issues.

Of course, for Microsoft, the "biological child" Windows Defender is always No. 1. But in the recent anti-virus software test by AV-Test, the world-renowned anti-virus testing organization High fidelity and credibility, Kaspersky, McAfee and VIPRE Security occupy the highest position in the list of Top 10 Best Antivirus software in early 2018 for Windows 10.
