

Microsoft Face Swap: Very funny face transplant application for smartphones

Face Swap is an application developed by Microsoft that allows users to pair their faces with other bodies. The application provides a large number of images for face transplantation. In addition, users can search for free images online to swap faces.

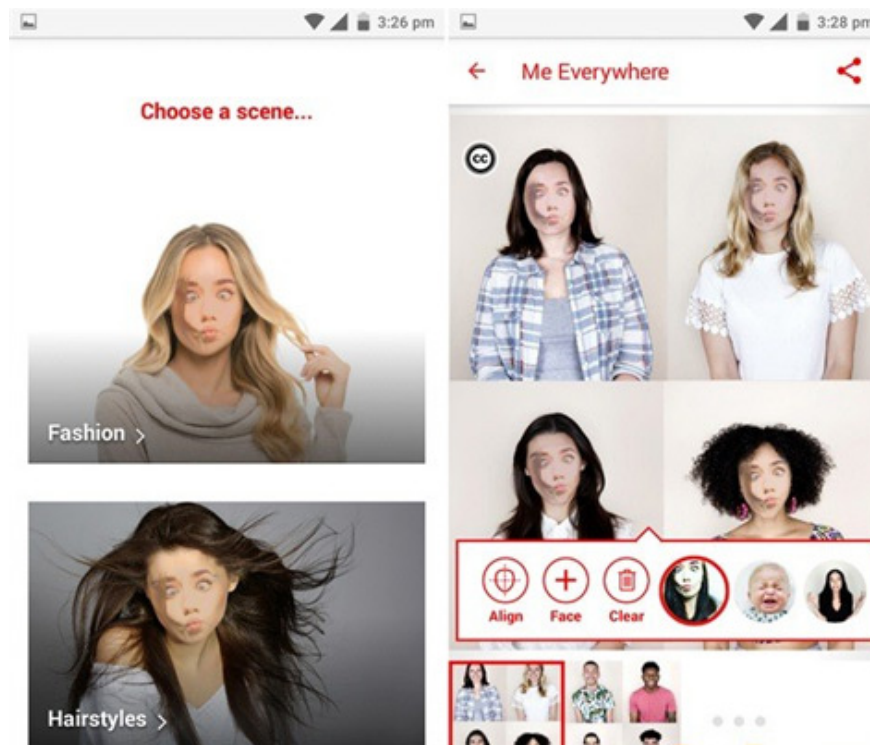

Face Swap is an application developed by Microsoft that allows users to pair their faces with other bodies. The application provides a large number of images for face transplantation. In addition, users can search for free images online to swap faces (under Creative Commons copyright law). You can download Face Swap directly on CH Play and App Store.

Swapping faces with Face Swap is extremely easy. Users do not need to do any photo editing, just take a selfie photo, then select the images available to swap faces.

However, you should note, when taking a selfie image, you must adjust the face that matches the oval shown on the phone screen, should turn on the camera flash or choose places with many bright photos to take pictures. So you get the standard face to swap faces.

Once you have the right face, you will proceed to choose the image to replace. The application has a lot of image categories such as fashion, hairstyle, sports, characters, expressions, scenes. ., in each category there are hundreds of photos used to swap faces.

In addition to these photos, you can also search your favorite images online with Bing search engine (under Creative Commons license). Basically, users can search for favorite characters and conduct face swaps.

When the image has been selected, the result of the merging between the user's face and the body of the image will be displayed on the screen. If you are happy with the image, click the **Save to camera roll** button to save the image to memory.

Microsoft Face Swap is a fun application for Android and iOS users to try out new clothes, hairstyles or create funny images to share on social networking sites.
