

Microsoft fixes Skype battery drain on Android

Before many users complained that the Skype version running on Android ran a lot of battery life, Microsoft has released an update that fixes this problem.

Before many users complained that the Skype version running on Android ran a lot of battery life, Microsoft has released an update that fixes this problem.

Skype on Android has just got an update to improve battery usage

According to *CNET*, there are now many Android devices that use touch screens with many different sizes. Therefore, when Skype was run in the background, the battery life was greatly reduced.

And for Android users to be more secure, Microsoft has released a new Skype update that claims to have "*improved battery performance on the phone*" positively.

Besides, this version also adds the ability to turn off notifications when chatting in groups.

Reportedly, in addition to the version running on Android, Skype also has a version running on iOS and Windows Phone.
