

Microsoft invites you to make your own Xbox One game

Microsoft has started to open the program Xbox Live Creators Program for everyone. This program allows anyone to make games and release them to the public.

With only one skill, you can even make money for your creativity with this Xbox Live Creators Program. As long as the game is good enough.

In March, Microsoft revealed the **Xbox Live Creators Program**. This program is now officially open to everyone. It gives any developer the opportunity to make games and publish on Xbox Store and Windows 10. As for us, this means there will be more games to play, and many of them are free. charge.

Designed for amateur game developers

Xbox Live Creators Program is derived from the @ **ID Xbox** program. While the ID @ Xbox is for professional developers, it gives them the opportunity to release unlimited playable games and a comprehensive review, the Xbox Live Creators Program is geared towards 'studios, lovers'. likes, teachers, small students and amateurs'.

You can make Xbox One games with 'Xbox One console, **Dev Mode Activation application** for free from the Xbox Store and game engines like **Unity, Construct 2, MonoGame** and **Xenko**'. Then all you need to do is use your Microsoft Developer account, download **Xbox Live Creators SDK** and get your game through 'a simple and concise certification process'.

Games released via Xbox Live Creators Program will get 'all of Xbox Live's social features', but except 'Achievements, Gamerscore or multiplayer online features'. If you want to use any of the features listed above, you need to join the @ ID Xbox program.

The first game group was released through the Xbox Live Creators Program, now available on Xbox Store. Including games partying Animal Rivals, puzzle games like ERMO or action games like Stereo Aereo. You can find them under the Creators Collection section.

The revolution is coming back

In many ways, we are returning to the past. The 80s saw developers of game-making games in the bedroom, for systems like the Commodore 64 and ZX Spectrum. Now, in 2017, the revolution continues. The only problem is quality control and you have to choose the gem among the numerous choices.
